1. Introduction

The purpose of this document is to present a detailed description of Saferpay. It will explain the purpose and features of the system, the interfaces of the system, what the system will do, the constraints under which it must operate, and how the system will react to external stimuli. This document is intended for both system stakeholders and developers and will serve as the foundation for software development.

2. Saferpay

Easy, flexible, secure - The comprehensive e-payment solution from Worldline for easier and more secure payment in your online shop.

Saferpay is a comprehensive e-payment solution for easy and secure payment in your online shop. Saferpay allows you to process all common national and international payment methods in your online shop- via just one single interface. With just a few clicks, the solution can be quickly and flexibly integrated into most shop systems.

This Odoo module is compatible to work with Saferpay payment methods. This supports the following payment methods and workflows of Saferpay.

- VISA
- MASTERCARD
- MAESTRO
- AMERICAN EXPRESS
- BANCONTACT
- DINERS
- JCB
- EPS
- KLARNA
- SOFORT BY KLARNA

- UNIONPAY
- PAYPAL
- TWINT
- PAYDIREKT
- IDEAL
- EPRZELEWY
- ALIPAY
- GOOGLEPAY
- APPLEPAY
- POST FINANCE PAY
- ACCOUNT-TO-ACCOUNT
- SEPA ELV
- WECHAT PAY
- WL CRYPTO PAYMENT
- GIROPAY
- SAFERPAY CREDIT/DEBIT

Support all Saferpay features, including the payment page, transaction interface, Saferpay fields, saved card functionality, refund, and cancellation. Additionally, ensure multi-website compatibility.

3. Configurations and Requirements

- ODOO working environment.
- License for Saferpay module.
- Before the installation, you must have a valid account on the Saferpay terminal.

- API credentials for Saferpay (Terminal ID, Customer ID, API Username and API Password) for Live and Test environment.
- A Valid Acceptance Agreement for payment Methods and credit cards.

4. General Configurations in the Backend

We can set the Saferpay configurations data by navigating to *Invoicing* → *Configuration* → *Saferpay Provider Configuration*.

- **Production Url:** We can set the production URL.
- **Test Url:** - We can set the Test URL of Saferpay, this is used to switch the Test/production environment.
- **Customer ID:** Set the Customer Id of the Saferpay account.
- **Terminal ID:** Set the Terminal Id of the Saferpay account.

We can get the payment means and terminals from the menu *Settings* → *Payment Means / Terminals* / *Terminals* in Saferpay Backoffice.

Figure 1 - General Configuration

- **API Username:** Set the API Username.

- **API Password:** Set the API Password, we can create new API login from Saferpay Backoffice, *Settings* → *JSON API basic authentication* → *Create new JSON API login*.

<input type="checkbox"/>	Creation Date	Username	Description
<input type="checkbox"/>	19.06.2023 16:01	SAFEPAY_20230619_1601	SAFEPAY_20230619_1601

Figure 3 – Retrieving Saferpay field access token

- Liability Shift Behaviour:** If the liability shifts (liability shift is used to check this transaction is done by any fraud user) of the card gets failed, then the workflow proceeds with this setting, there are two liability shift behaviours, they are,
 - Hold
 - Cancel

Note: If no option is selected, the capture settings of the respective payment method will be applied by default.

Force 3D secure authentication during transactions: If enabled, Saferpay will ensure a Forced 3ds authentication. The 3ds authentication type is also displayed in Transaction overview section.

- Payment Method Synchronization:** Automatically retrieves and configure all available payment methods from the Saferpay account.
- Customer License:** Fetches license package and features details from Saferpay and adds them under *Invoicing-> Configuration -> Saferpay Provider Configuration -> Customer License*.
- Create API Key:** Generates the API key required for Saferpay field functionality.

- **Send Status Email:** Sends status update emails to customer.
- **Update Payment Method Logo From Saferpay(svg):** If this field is enabled, the system will automatically run a weekly cron job to update the payment provider's logo. If disabled, a static image will be used instead.

Figure 4 - Configuration List View

The screenshot shows the 'Saferpay Provider Configuration' form in the Odoo interface. The form is divided into two main sections. The left section contains fields for 'Production Url' (https://www.saferpay.com), 'State' (radio buttons for Disabled, Enabled, and Test Mode), 'Test Url' (https://test.saferpay.com), 'Customer ID', 'Terminal ID', 'Send Status Email' (checked), and 'Need CVC form for Alias payment' (unchecked). The right section contains fields for 'API User Name', 'API Password' (masked with dots), 'API Key', 'Liability Shift Behavior', 'Force 3D secure authentication during transactions' (checked), and 'Update Payment Method Logo From Saferpay(svg)' (unchecked). At the bottom, there are buttons for 'Payment Method synchronization', 'Create API key', and 'Customer License'. The form is titled 'Saferpay Provider Configuration' and is part of the 'Configuration' menu.

Figure 5 - Configuration Form View

- **Smart buttons**

- Providers: List of acquirers (Payment methods) under this configuration.
- Logging: List of all logs regarding the API call.

5. Payment Method Configurations

We can configure the payment methods for Saferpay from the menu *Invoicing* → *Configuration* → *Payment Methods*, as shown in the figure.

The screenshot shows the Odoo Invoicing Configuration menu. The 'Payment Methods' option is highlighted with a red box. The menu structure is as follows:

- Invoicing
 - Customers
 - Vendors
 - Reporting
 - Configuration
 - Add a Bank Account
 - Accounting
 - Taxes
 - Journals
 - Currencies
 - Fiscal Positions
 - Journal Groups
 - Tax Groups
 - Online Payments
 - Payment Providers
 - Payment Methods**
 - Payment Tokens
 - Payment Transactions
 - Saferpay Ideal IssuerId Config
 - Saferpay Provider Configuration
 - Saferpay Provider Logging
 - Management
 - Product Categories

The right sidebar shows the 'Confirmed' status of the payment method configuration. The details for the payment method are as follows:

Figure 6 - Payment Methods list view

The screenshot shows the Odoo interface for configuring a payment method. The top navigation bar includes 'Invoicing', 'Customers', 'Vendors', 'Reporting', and 'Configuration'. The breadcrumb trail is 'New / Saferpay - JCB / Payment Methods'. The form title is 'JCB'. The 'Code' field is 'saferpay'. The 'Active' toggle is turned on. The 'Supported Countries' field states 'All countries are supported'. The 'Supported Currencies' field shows 'CHF', 'EUR', 'USD', and 'GBP'. The 'Providers' tab is selected, showing 'Saferpay Code' as 'JCB' and 'Supports Saferpay Fields' as checked. The 'Saferpay' checkbox is also checked.

Figure 7 - Payment Method form View

Here we can set the allowed currency and code that are used for Saferpay transaction.

- **Saferpay Code:** Code that is used for Saferpay communication. To identify the payment method used for the transaction.
- **Allowed Currencies:** Used to set up the predefined currencies to that payment method.

6. Provider Configurations in Backend

- We can set the acquirers/payment methods for Saferpay from the menu *Invoicing* → *Configuration* → *Payment Providers*, as shown in the figure.

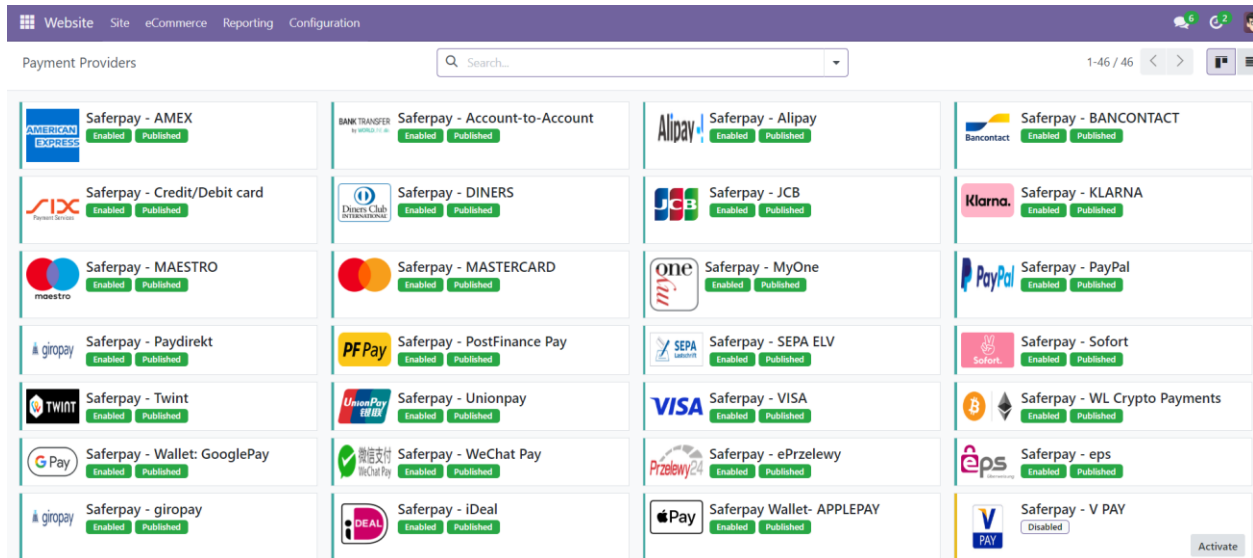

Figure 8 – Payment Providers Kanban View

The screenshot displays the 'Saferpay - AMEX' configuration form in Odoo. The form is divided into several sections: 'Code' (Saferpay), 'State' (Enabled), 'Website', 'Credentials', 'Configuration', and 'Messages'. The 'PAYMENT FORM' section includes 'Payment Methods' (AMEX), 'Allow Saving Payment Methods' (checked), and 'Capture Amount Manually' (unchecked). The 'PAYMENT FOLLOWUP' section includes 'Payment Journal' (Bank). The 'AVAILABILITY' section includes 'Maximum Amount' (\$ 0.00), 'Currencies' (CHF, EUR, USD), and 'Countries' (Select countries. Leave empty to make available everywhere).

Figure 9 - Payment Providers form view

Here we can set the Odoo default configurations for providers:

- **Payment Journal:** Used to set up the Journal used for this provider.
- **Capture Amount Manually:** If selected then the manual capture option gets activated for that provider.
- **Allow Saving Payment Methods:** - An option that enables the card to be saved for future transactions from checkout page and from My Account -> Payment Methods.
 - **Tokenization:** This option is used along with the Allow Saving Payment methods feature. Go to related payment method of the provider -> *Configuration* -> *Enable "Tokenization Supported"* checkbox. This enables users to decide whether to save the card while making payment.
 - **My Account save card permission for Portal Users:** Go to *Settings* -> *Technical* -> *Access Rights*. Provide full access to Portal users for payment.token.system and payment.provider.system.

Figure 10 - Save Card feature enabled

- **Payment Methods:** -Used to display the Supported payment methods. We get the Allowed Currencies and Code for Payment provider from payment methods.

7. Configurations Only for Saferpay Providers

- **Need Order Limit:** If checked we can set the minimum and maximum order limits.
- **Send Customer Address:** Used to decide to send the customer delivery and billing address to Saferpay back office.
- **Support Notify URL:** It is used to set this acquirer's support Notify URL.
- **Customer Confirmation email:** It is used to determine whether a customer confirmation email is needed. Saferpay sends the mail only if the customer is redirected to Saferpay payment page. Emails for DCC transaction will be sent on all payment interfaces.

- **Allowed Currencies:** The Allowed Currencies are loaded from Payment methods, the listing of payment methods on the payment page depends upon this currency. If the shop currency is not listed in these allowed currencies, then it is not listed on the shop payment page.
- **Payment Interface:** It is used to change the payment interface, there are 3 options:
 - **Payment page:** - If enabled, then the checkout page will direct to the Saferpay Payment page.
 - **Transaction Interface:** - If enabled, then the checkout page will load the transaction interface (I-frame).
 - **Saferpay Fields:** If enabled, payment can be proceeded with Saferpay Fields. The workflow is the same as an I-frame, the data is captured by a fully PCI-certified system.
- **Register Payment Type:** This is used to define the type of payment method/acquirer, it is more important for saving cards. Which are,
 - CARD
 - BANK_ACCOUNT
 - POSTFINANCE
 - TWINT
- **Support Refunds:** It is used to specify whether this acquirer supports refunds.
- **Smart Buttons:**
 - **Saferpay Logging:** List of all logs regarding the API call used for this acquirer.
 - **Business License:** This is used for license switching, e-Commerce, and Business license.

8. Payment Interface

- Go to menu *Invoicing* → *Configuration* → *Payment Providers*, choose the acquirer. Then the configuration of the payment method is as shown in the figure below.

The screenshot shows the configuration page for a payment provider. It is divided into two main sections: 'PAYMENT FORM' and 'AVAILABILITY'.

11. Refund

- To enable the refund option, ensure that the provider license is switched to a **Business License**.
- The refund functionality offers two options:
 - **Referenced Refund:** This option allows you to reference the original transaction in the Saferpay back office. Referenced refunds can be performed for both multipart (manual) captured transactions and normal captured transactions.
 - **Manually Refunded in Saferpay BO:** If refund is completed from Saferpay backoffice to map same in Odoo need to enable this button to proceed with the credit note flow

Note: For WL Crypto payments, Refunds is only possible from Saferpay backoffice.

- Important Note:** Some payment methods may not support direct refunds. It is essential to consult the Saferpay documentation before configuring these options to ensure compatibility and proper setup.

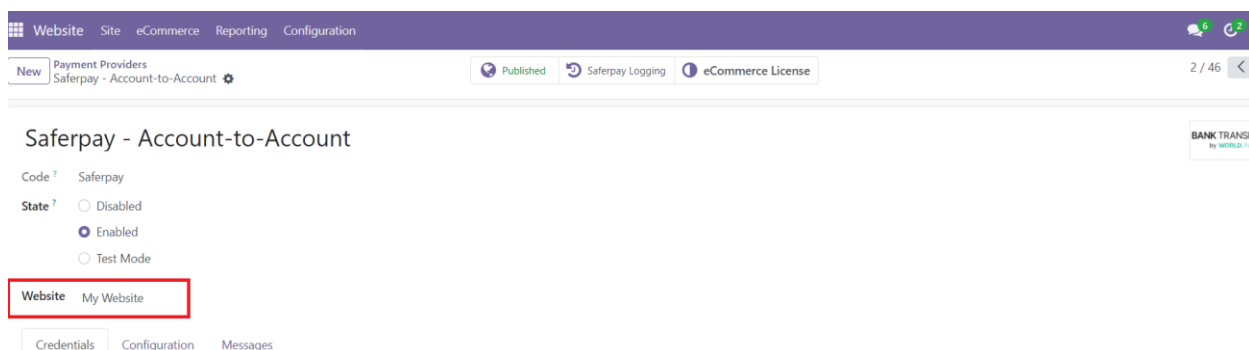

- To process a refund for multiple credit notes, select the credit notes for which you want to initiate the payment. Then, click on the **Register Payment** option. This action will create individual refund payment transactions for each selected credit note.

12. Saferpay Multi-website Backend configuration

- If no website is mapped against a payment provider, it will be available for all website domains.
- For multi-website configuration, need to create multiple Saferpay payment Provider by duplicating the existing Saferpay payment Provider.

- After creating the Saferpay payment Provider, map the respective website and add the Saferpay credentials.

- For multi-website functioning, it is necessary to set the domain for the websites.

13. Brief Description

For the smooth functioning of this plugin, there are a few configurations that need to be done in the backend.

- Setting up Saferpay Provider Configuration is the initial step where the Terminal ID, Customer ID, API Username, API Password, API Key of your Saferpay web administration tool must be provided.
- The Saferpay payment methods will be listed on the shop payment page.
- Choose the Saferpay payment method, pay from the Saferpay payment page, and get back to the Odoo webshop.

Initial step-by-step description

Prerequisites: Before integrating the Saferpay payment Acquirer plugin make sure that you have a Saferpay web administration tool.

The interface with which you can easily verify and process transactions. API Username, API Password, API Key are the details we need from the webadmin tool for Odoo backend configuration.

Step 1: Install the Saferpay Payment Plugin.

Step 2: Add the Saferpay credentials (Terminal ID, Customer ID, API Username, API Password, API Key) in the Saferpay Acquirer Configuration record in the Odoo backend configuration.

Step 3: Click on “Payment method synchronization” button to automatically configure and enable available payment methods or can manually enable desired payment providers.

Step 4: Go to the e-commerce website, add products to the cart, and proceed to checkout.

Step 5: Choose the Saferpay payment method and click Pay now.

Step 6: Complete the transaction by filling out the necessary details on the Saferpay Payment Page.

Step 7: The order is placed on a successful payment transaction.

Saferpay Multi-website

Step 8: Multi-Website Configuration:

- To set up Saferpay for multiple websites, duplicate the Saferpay Provider configuration using the Duplicate button.

Step 9: Map and Configure Multiple Websites:

- Map the duplicated Saferpay Provider to the respective websites and enter the appropriate credentials for each.

Step 10: Set Domain for Websites:

- Ensure each website's domain is correctly set up in Odoo for proper multi-website functionality.

14. Technical Requirements / Compatible With:

- **Technical Requirements:** Odoo Sales, Payment, Contact, and Website modules.
- **Compatibility:** Supports Odoo 17 Community and Enterprise editions.
- **Supported API:** Saferpay JSON API version 1.40.

15. Changes Log / Release Notes

- **Version 2.0.2:** June 2025
 - Enhanced access rights management for both Administrators and Users, ensuring more granular control and improved security.
- **Version 2.0.1:** February 2025
 - Improvements and Odoo Enterprise edition compatibility.
- **Version 2.0.0:** October 2024
 - Updated to JSON 1.40.
 - Added support for Account-to-Account, SEPA ELV, and WeChat Pay providers.
 - Introduced multi-website support.
- **Version 1.0.0:** September 2024
 - Initial release.
