

Pits Backend Indexer

Product specification

PITS Backend Indexer is a Magento 2 extension developed by PIT solutions which enables admin users to update individual or all indexes manually from the admin panel easily instead of using command line user-interface (CLI). By default, Magento 2 provides command-line re-indexing functionality only which can be hard for the admin users who are not so familiar with the command prompt.

Features

- PITS Backend Indexer provides a Graphical User Interface (GUI) to re-index the indexes easily from the admin panel of the website.
- The extension allows individual and mass indexing of the database.
- Supports access control for admin users.

Installation

To install the Backend Indexer Extension for Magento 2, follow the steps below.

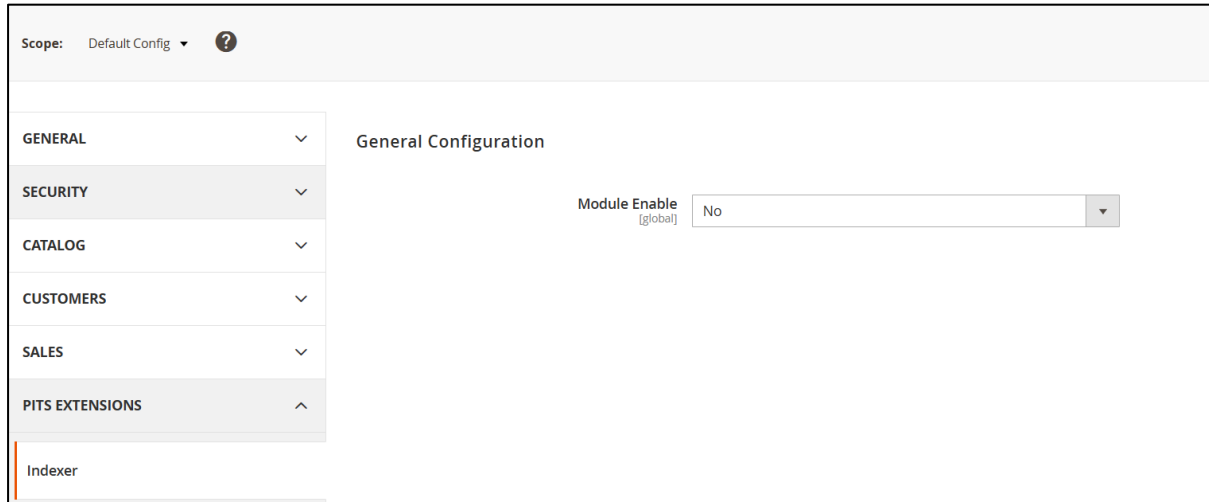

- 1) Download the extension.
- 2) Access your web server directories and unzip and upload the content of the zip file to *app/code/Pits/Indexer* directory.
- 3) Run the following commands from the SSH terminal of the server to complete the installation.

- Enable the module - *php bin/magento module:enable Pits_Indexer*
- Update the database schema - *php bin/magento setup:upgrade*
- Generate and pre-compile classes - *php bin/magento setup:di:compile*
- Deploy static files - *php bin/magento setup:static-content:deploy*
- Clear the cache - *php bin/magento cache:flush*

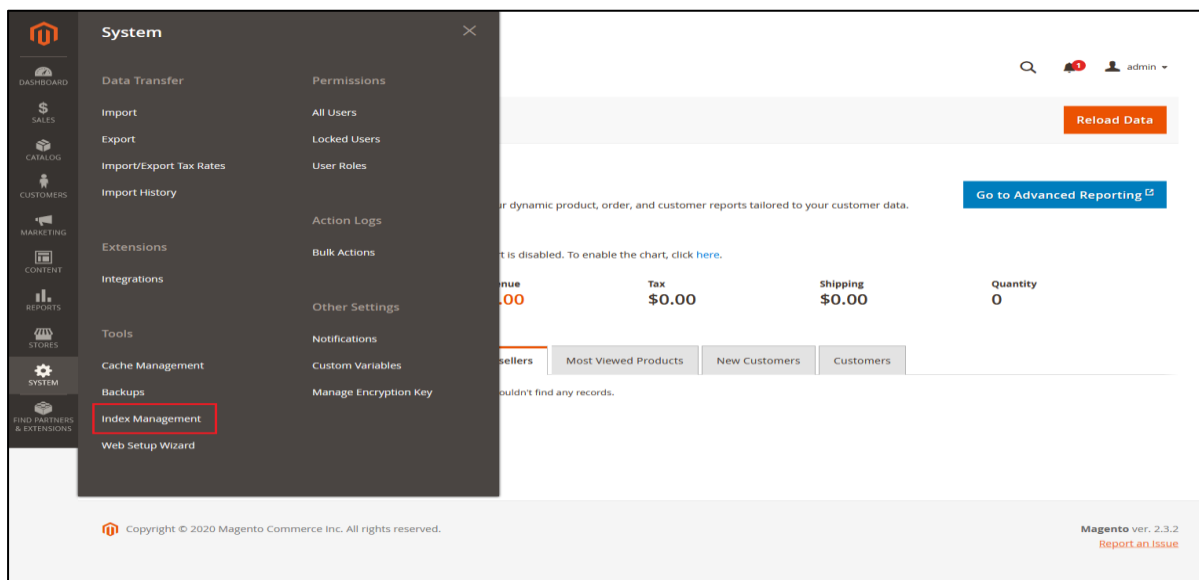

Screenshots / Video

From the admin backend, go to **Stores > Configuration > PITS EXTENSIONS > Indexer**

Set the **Module Enable** option to 'Yes', then go to **System > Index Management**. When the module is enabled, the '**Reindex**' action becomes available in Index Management. If the module is disabled, the '**Reindex**' option will no longer be visible.

Reindex some indexers

- Click to select the indexers you need to reindex.
- Select **Reindex**
- Click **Submit**
