

Help Desk Extension with AI integration

Product Specification

The Help Desk Extension for Magento 2 is a pivotal tool designed to optimize customer support processes, seamlessly integrated into the Magento platform. It is a foundational solution to efficiently manage customer inquiries, support tickets, and communication channels, ensuring a user-friendly experience for both customers and their clients.

This extension facilitates efficient ticket management, enabling customers to create, track, and prioritize support tickets with ease. It allows the assignment of tickets to specific agents or departments, streamlining handling and resolution processes. Featuring a threaded conversation view, it provides contextual insights for agents, enhancing the quality and speed of responses. Customers benefit from a simple interface integrated into their accounts, facilitating convenient ticket submission and real-time updates on their inquiries.

The extension's agent dashboard presents a comprehensive overview of ticket statuses, response times, and pending tasks. Agents can categorize and filter tickets and provide support for effective issue resolution. Customizable response templates expedite common query resolutions, and personalized email templates enhance customer engagement.

In addition to the ticket management and customer support features, the Help Desk Extension for Magento 2 offers a streamlined working hours setup. This functionality allows administrators to define specific working hours for their customer support team, which are prominently displayed to customers, through the front-end interface. Clients can easily identify the operational hours during which they can expect prompt responses and assistance. This transparent approach not only manages customer expectations effectively but also ensures that inquiries submitted outside these hours are noted, setting the stage for timely resolutions once the support team is back online. This feature enhances transparency and customer satisfaction by providing clear visibility into the support team's availability.

The Help Desk Extension for Magento 2 also seamlessly integrates advanced AI features. This powerful extension offers administrators the capability to swiftly generate precise responses to customer inquiries and tickets using AI support functionalities. By leveraging AI, admins can generate quick-answer templates and ticket replies, significantly reducing response times while maintaining consistency and accuracy across communications. This seamless AI integration significantly improves

platform efficiency, facilitating smooth management of customer inquiries and enhancing the overall support experience.

Moreover, reporting and analytics capabilities empower agents with insights into ticket volumes, resolution rates, and customer satisfaction metrics. These data driven insights enable informed decisions to improve customer service continually. With seamless integration into Magento architecture, this extension stands as an indispensable tool for merchants seeking to elevate their customer support standards within the Magento 2 ecosystem.

Installation Steps

To install the Help Desk Extension for Magento 2, follow the steps below.

- 1) Download the extension.
- 2) Access your web server directories and unzip and upload the content of the zip file to `app/code/Pits/HelpDesk` directory.
- 3) Run the following commands from the SSH terminal of the server to complete the installation.
 1. Enable the module - `php bin/magento module:enable Pits_HelpDesk`
 2. Update the database schema - `php bin/magento setup:upgrade`
 3. Generate and pre-compile classes - `php bin/magento setup:di:compile`
 4. Deploy static files - `php bin/magento setup:static-content:deploy`
 5. Clear the cache – `php bin/magento cache:flush`

Features

- Multi-domain capability.
- Multi-Email account connections.
- AI-driven suggestions for quick answers and ticket responses based on the query.
- Clear presentation so that different people can work with it.
- Clear status information.
- Configure spam filters to focus on relevant tickets only.
- Browse the full history of a ticket.
- Create custom fields.

- Manage access permissions.
- Evaluate customer satisfaction using support with star rating.
- View the operational efficiency in helpdesk reports dashboard.
- Create Unlimited Departments, Agents, and Categories.
- Able to Create & Reply to Ticket directly to Email.
- File Attachment to the ticket.
- Set Priority, Status, and Category section for each ticket.
- Quick Reply or Close a ticket.
- Easy to Check ticket history with threaded conversation view.
- Ticket auto-expiration & auto-reminder.
- Send replies not only to a ticket author, but also to all users that should be notified.
- Organize your helpdesk team into departments, set default agents for each and solve customer problems quickly.

Features Overview

1. **Ticket Management System:** Efficiently handle customer inquiries, track their progress, assign them to the right agents or departments, and provide a comprehensive view for better context and quicker resolutions.

- **Creation and Tracking:** Customers can easily create and track support tickets within their accounts.
- **Prioritization:** Ability to prioritize tickets for urgent issues.
- **Threaded Conversation View:** Provides a contextual view for agents, aiding in faster and more accurate responses.

2. **Customer Interface:** Seamlessly integrated into customer accounts, this interface simplifies ticket submission and offers real-time updates, ensuring a hassle-free experience for users managing their inquiries.

- **User-Friendly Interface:** Integrated interface within customer accounts for seamless ticket submission and real-time updates on inquiries.
- **Convenience:** Customers can view and manage their tickets effortlessly.

3. **Agent Dashboard:** Empower agents with data-driven insights into ticket volumes, resolution rates, and customer satisfaction metrics, enabling informed decisions and continual improvement in service delivery.

- **Comprehensive Overview:** Provides agents with a dashboard displaying ticket statuses, response times, and pending tasks.
- **Categorization and Filtering:** Ability for agents to categorize and filter tickets for effective management.
- **Support Tools:** Features for agents to efficiently resolve issues, including customizable response templates and personalized email templates for enhanced customer engagement.

4. **Reporting and Analytics:** Empower agents with data-driven insights into ticket volumes, resolution rates, and customer satisfaction metrics, enabling informed decisions and continual improvement in service delivery.

- **Insightful Reports:** Reporting capabilities to track ticket volumes, resolution rates, and customer satisfaction metrics.
- **Data-Driven Insights:** Empowers agents with data to make informed decisions for continual

5. **Security and Privacy:** Ensures the utmost safety and confidentiality of customer information and ticket data, implementing robust measures to safeguard sensitive data within the system.

- **Data Security Measures:** Ensures the safety and confidentiality of customer information and ticket data.

6. **AI Integration:** Incorporates advanced AI capabilities enabling administrators to generate quick-answer templates and ticket replies. AI-driven features enhance efficiency, streamlining customer inquiries and elevating the overall support experience.

Admin Panel Configuration

Navigate to *Admin > Help Desk > Settings*.

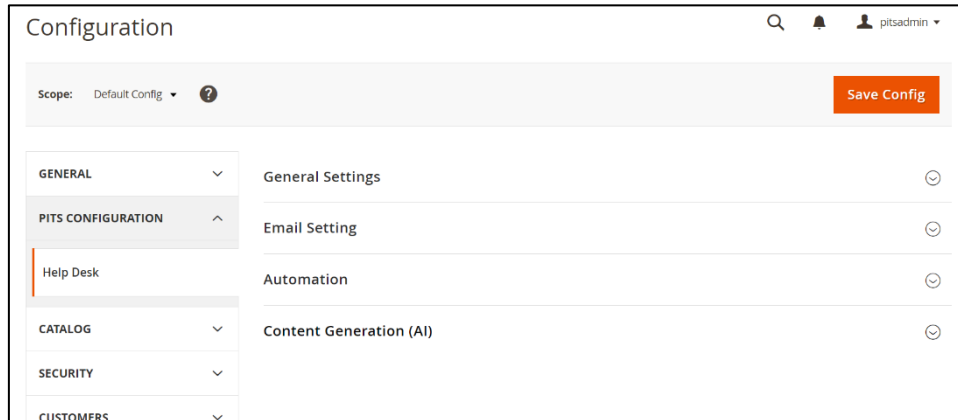

Figure 1 – Help Desk Settings – Configuration

Figure 1 displays the admin configurations of the extension, these settings are categorized into four groups, each containing specific fields.

The Groups are listed below

- **General Settings** – Controls general parameters of the extensions.
- **Email Settings** – Controls configurations for email-related features like notifications and communication preferences.
- **Automation** – Governs automated processes and workflows, enhancing operational efficiency within the extension.
- **Content Generation (AI)**– Manages the generation of content through AI-driven processes.

The **General Settings** encompass the following fields

- **Module Enable** – Enable / Disable module.
- **Additional Info Note** – Space for extra instructions or clarifications.
- **Show Spam Status in Frontend** – Display spam status prominently on the user interface.
- **Customer Can Edit Rating** – Customers can edit rating if the field is enabled.
- **Customer Can Edit Like** – Customers can edit like if the field is enabled.
- **Show Working Hours** – Exhibit designated operational hours on the user interface.
- **Add Working Hours Note Before** – Include instructions preceding the displayed working hours.
- **Working Hours** – Field to enter the working hours

- **Add Working Hours Note After** – Include instructions following the displayed working hours.

Figure 2 – Help Desk Settings – General Settings

The **Email Settings** encompass the following fields

- **Send Notification Email Copy To** – Specifies email addresses for receiving notifications, supporting multiple email addresses.
- **Enable Test Mode** – Allows toggling email sending functionality. When Test Mode is activated, emails will not be dispatched.
- **Email Sender** – Options to choose the identity from which emails are sent.
- **Template of New Ticket Email** – Selects the template for new ticket emails.
- **Template of New Message Email** – Selects the template for new message notification emails.
- **Template of Status Ticket Email** – Selects the template for status update emails.
- **Template of Reminder Email** – Selects the template for reminder notification emails.
- **Template of Assign Ticket** – Selects the template for assigned ticket notification emails.

The screenshot shows a form titled "Email Settings" with a close button in the top right corner. The form contains the following fields:

- Send Notification Email Copy To** [store view]: A text input field with a placeholder "Comma-separated."
- Enable Test Mode** [store view]: A dropdown menu set to "No" with a subtext "Emails will not send while test mode enabled".
- Email Sender** [store view]: A dropdown menu set to "General Contact" with a subtext "Select option for choosing the email sender identity".
- Template of New Ticket Email** [store view]: A dropdown menu set to "New Ticket (Default)" with a subtext "Select option for choosing the template for new ticket emails".
- Template of New Message Email** [store view]: A dropdown menu set to "New Message (Default)" with a subtext "Select option for choosing the template for new message emails".
- Template of Status Ticket Email** [store view]: A dropdown menu set to "Status Message (Default)" with a subtext "Select option for choosing the template for status update emails".
- Template of Reminder Email** [store view]: A dropdown menu set to "Ticket Reminder (Default)" with a subtext "Select option for choosing the template for reminder emails".
- Template of Assign Ticket** [store view]: A dropdown menu set to "Assign Ticket (Default)" with a subtext "Select option for choosing the template for assigned ticket emails".

Figure 3 – Help Desk Settings – Email Settings

The **Automation** encompass the following fields.

- **Enabled** – Allows toggling automation functionality.

- **Auto Close Ticket For, days** – Set the duration in days for automatic closure of tickets.
- **Completed Ticket Statuses** – Tickets with the selected statuses will be changed to closed.
- **Auto Reminder Ticket For, days** – Specify the time frame in days for automated reminder notifications to be sent.

The screenshot shows the 'Automation Settings' section of the Help Desk configuration. It includes four main settings:

- Enabled**: A dropdown menu set to 'Yes'.
- Auto Close Ticket For, days**: A text input field containing '1'. Below it is the instruction: 'Set the number of days to automatically close a ticket'.
- Completed Ticket Statuses**: A multi-select list with options: 'Open', 'Processing', 'Done' (which is highlighted), 'Spam', and 'Closed'. Below the list is the instruction: 'Tickets with the selected statuses will be considered as resolved or completed.'
- Auto Reminder Ticket For, days**: A text input field containing '1'. Below it is the instruction: 'Set the number of days for automated reminder notifications'.

Figure 4 – Help Desk Settings – Automation Settings

The **Content Generation (AI)** encompass the following fields

- **Enable Auto Content Generation** – Toggles the system's automatic content generation feature.
- **API URL** – Field for entering the URL for accessing a specific API's functionalities.
- **API Secret** – Field for entering the Unique secret key used for API authentication.

The screenshot shows the 'Content Generation (AI)' section of the Help Desk configuration. It includes three main settings:

- Enable Auto Content Generation**: A dropdown menu set to 'Yes'. Below it is the instruction: 'Enable/Disable use of ChatGPT to generate content.'
- API URL**: A text input field containing 'https://api.openai.com/v1/chat/completions'.
- API Secret**: A text input field. Below it is the instruction: 'OpenAI Secret Key. Click [here](#) to generate the Api Secret Key.'

Figure 5 – Help Desk Settings – Content Generation (AI) Settings

How It Works in Frontend

The helpdesk extension seamlessly integrates into the user's account page, offering a centralized hub for managing support queries. To access helpdesk tickets, Navigate to *Header Panel > Help Desk*.

The Features Included in Frontend are:

- **Comprehensive Ticket Management:** Easily monitor, review, and update your support tickets from one central hub.
- **User-Friendly Support Requests:** Initiate support requests effortlessly with a clear and simple form.
- **Responsive Design:** Enjoy a consistent and responsive design across all devices.
- **Quick Helpdesk Access:** Access your support tickets with one click, whether logged in or guided through a hassle-free login process.
- **Detailed Ticket View:** Delve into specific support queries on a dedicated page, tracking progress and interactions.
- **User Feedback Rating:** Provide feedback through the rating system, actively contributing to service improvement.
- **Spam Status Enhancement:** Enabling the "Show Spam Status in Frontend" option in the general configuration provides users with a clear representation of spam status. During the submission of the ticket if it is identified as spam a message informing the same will be displayed in the frontend. Also, the ticket status will be "Spam". When this option is disabled, the ticket status will be "Processing" in the frontend even though the actual status is "Spam", which will be correctly displayed in the backend.

Figure 10 – Help Desk Frontend – Working Hours View

Note: The 'Create New Ticket' button will appear on the frontend only if the category and department are configured for the store views correctly by the administrator.

How It Works in Backend

Within the Magento 2 backend dashboard, the extension prominently features a dedicated menu that grants users access to various functionalities within the Helpdesk extension. This menu serves as a centralized hub, housing a range of submenus that offer distinct actions and options, catering to different aspects of the Helpdesk extension's operations.

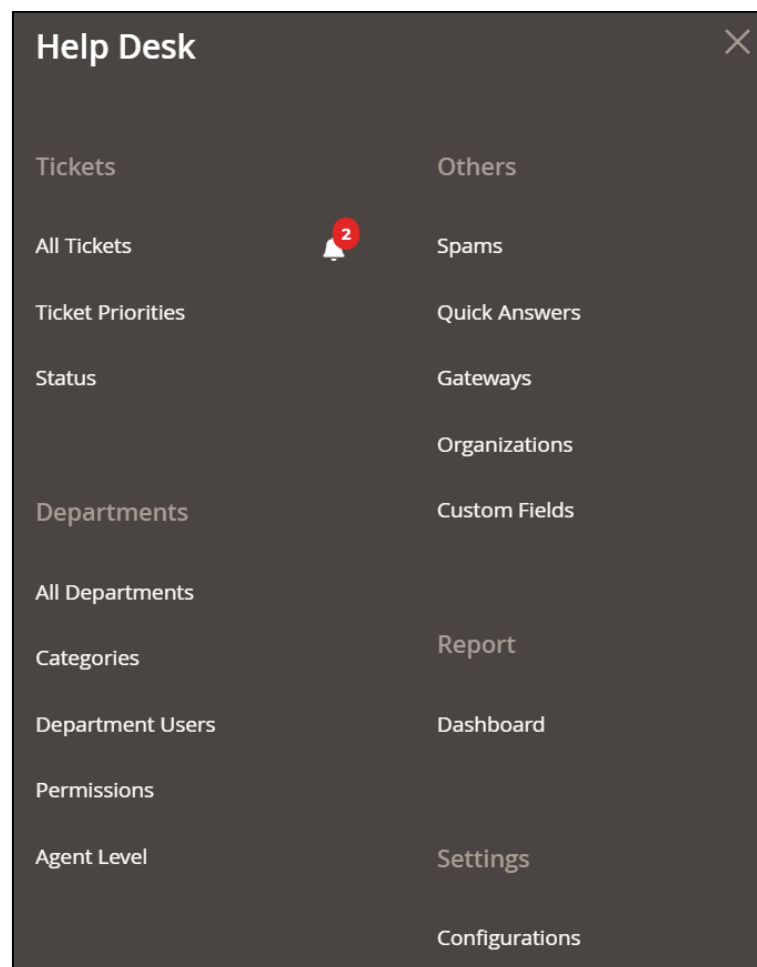

Figure 11 – Help Desk Menu

Admins need to set up specific configurations in the backend to enable a seamless Helpdesk extension experience. Once these settings are in place, users gain access to a full suite of support system features.

If categories, departments and ticket priorities haven't been added in the backend, the frontend will display a user-friendly notification, informing them that the necessary setup is pending from the administrator.

Admins have the ability to configure these settings, empowering users to effectively handle their support issues, monitor statuses, and interact efficiently with the support team. This ensures a streamlined and efficient user experience, guided by administrators' backend configurations in the Helpdesk system.

Figure 12 – Admin Setup Pending

The sub-menus included in the Help Desk extension

- **All Tickets:** Dedicated space ensuring efficient handling of customer inquiries or reported issues.
- **Ticket Priorities:** Handles the efficient creation and management of ticket priority options.
- **Status:** Handles the efficient creation and management of status options.
- **Category:** Handles with efficient creation and management of categories.
- **Department:** Handles with efficient creation and management of departments.
- **Department User:** Manages user access and permissions within specific support departments for controlled information access.
- **Permission:** Controls user access rights and privileges across various help desk sections.
- **Agent Level:** Handles the efficient creation and management of agent levels used to designate different levels of agents within the system.
- **Spam:** Automatically filters incoming emails to block spammers using specific patterns.
- **Quick Answer:** Repository for readily available solutions to common customer issues.
- **Report:** Generates comprehensive analytics for support performance and ticket resolution insights.
- **Gateway:** Automatically fetches and converts emails into tickets by connecting email accounts.

- **Organization:** Facilitates the addition and management of various organizations within the system, allowing agents to assign tickets to specific organizations for enhanced prioritization and streamlined handling.
- **Configurations:** Customizable parameters for tailoring help desk functionalities.
- **Custom Fields:** Creates and manages tailored data fields for specific business needs within support tickets.

All Tickets

The Ticket page is an interface designed for streamlined ticket management. It offers a range of functionalities for the efficient handling of ticket-related tasks.

To access the ticket, Navigate to *Admin > Help Desk > All Tickets*.

The Features included in the Ticket Menu are,

- Organizing and sorting tickets based on various parameters.
- Filtering by status, priority etc.
- Provides Mass Delete of tickets.
- Export Data in CSV or XML formats.
- The Messages tab in Ticket View Page provides threaded view for admin-user exchanges.
- The General tab in Ticket View Page displays vital customer details and user rating.
- The Additional tab on Ticket View Page includes ticket-handling agent information, ticket priority, and status for detailed context.
- The Other Tickets tab in the Ticket View Page displays the user's history, showing previous tickets from the same user.
- The Additional Data Field Tab in Ticket View Page includes the field values of the custom fields.
- Admins can prompt AI to generate replies for customer queries. If AI content generation is enabled in configurations.

Ticket Priorities

The Ticket Priority page is designed for streamlined priority management.

The fields included in the Ticket Priorities

- **Priority Code:** The unique identifier for the entity within the system which cannot be editable.
- **Active:** Toggle the priority visibility.
- **Priority Label:** Default descriptive name or label of the priority.
- **Store View Specific Label:** Store specific descriptive name or label of the priority.

Steps to create a ticket priority

- Navigate to *Admin > Help Desk > Ticket Priorities*.
- Click on 'Add New Priority' button.
- Fill in the details for the ticket priority.
- Save the form to create the ticket priority.

The screenshot shows the 'Add Priority' form in a web application. At the top, there's a header with the title 'Add Priority', a search icon, a notification bell, and a user profile 'pitsadmin'. Below the header is a navigation bar with a 'Back' button and a 'Save' button. The form is divided into sections. The 'General' section contains three fields: 'Priority Code' (a text input with a red asterisk and a hint 'Enter the code for the priority.'), 'Active' (a dropdown menu with 'Yes' selected and a hint 'Enter whether the priority is active or not.'), and 'Priority Label' (a text input with a red asterisk and a hint 'Enter the default label of the priority.'). Below this is the 'Store View Specific Label' section, which is collapsed. The 'Main Website' section is expanded, showing the 'Main Website Store' section with three text inputs: 'Default Store View', 'de_store', and 'fr_store'.

Permission

The permission page is a hub for administrators to oversee and organize permissions within the system.

The fields included in the Permission

- **Role:** Determines system authority by specifying user roles within the helpdesk system.
- **Access to tickets of departments:** Streamlines ticket management by enabling the assignment of specific departments to selected roles.
- **Can Delete Tickets:** Empowers administrators to control ticket deletion privileges for the assigned role.

Steps to create a permission

- Navigate to *Admin > Help Desk > Permissions* for accessing the page.
- Click on 'Add New Permission' button.
- Fill in the details for the permission.
- Save the form to create the permission.

Quick Answer

The Quick Answer feature streamlines communication management within the system by providing administrators with a comprehensive interface to oversee, organize, and modify a list of quick responses. This tool empowers efficient handling of inquiries by allowing the addition, editing, and activation of predefined responses, ensuring prompt and accurate support for users.

The fields included in the Quick Answer

- **Title:** Descriptive name or label of the Quick Answer.
- **Content:** Inputs specific content for Quick Answer.
- **Status:** Toggle the Quick Answer visibility.
- **Generate AI Content:** Generates AI content for Quick Answer. (Visible only with enabled Content Generation (AI) in configurations)

Steps to create a Quick Answer

- Navigate to *Admin > Help Desk > Quick Answers*.
- Click on 'Add New Quick Answer' button.
- Fill in the details for the quick answer.
- Save the form to create the quick answer.

Report

Reports provide a real-time graphical representation of the ticket-related data.

To see the report, Navigate to *Admin > Help Desk > Report*.

The report offers various features to enhance your understanding of ticket-related data.

- Allows tracking ticket fluctuations over days and months in real-time.
- Helps admins understand insights on seasonal trends and activity peaks.
- Facilitates proactive resource allocation for peak ticket periods.
- Optimizes team productivity across different operational cycles.
- Clearly delineates ticket statuses—open, closed, processing.
- Enables targeted interventions and issue prioritization.
- Empowers decision-makers to pinpoint bottlenecks in the resolution pipeline.
- Allows implementation of measures to speed up specific ticket categories.
- Equips support teams with concise yet comprehensive information.
- Enables continuous improvement of ticket resolution processes.

Gateway

The fields included in the Gateway form.

- **Name:** Identifying label for the gateway configuration.
- **Email:** Email address associated with the gateway for communication.
- **Login:** Credentials used to access the gateway.
- **Password:** Secure key for gateway access.
- **Status:** Toggle to enable or disable the gateway.
- **Host:** Address indicating the location of the gateway.
- **Port:** Specific connection point for the gateway.
- **Protocol:** Communication method used by the gateway (e.g., POP3, IMAP).
- **Encryption:** Security protocol used for data transmission.
- **Search Keyword:** Term used to locate specific content within the gateway.
- **Fetch Folder:** Folder for email retrieval.
- **Fetch Max:** Maximum number of emails to retrieve per cycle.
- **Department:** Allocation of tickets to specific operational units.

- **Store View:** Selection of specific stores where the gateway interface is accessible for operational use.
- **Notes:** Additional information or remarks related to the gateway.

Steps to create a Gateway

- Navigate to *Admin > Help Desk > Gateways*.
- Click on 'Add New Gateway' button.
- Fill in the details for the gateway.
- Save the form to create the gateway.

Auto Closing of Tickets

In the helpdesk module, the auto closing of tickets is a streamlined process that enhances efficiency in managing support requests.

Process of Auto Closing of Tickets

- This automated process relies on specific parameters configured in the system, "Auto Close Ticket For, days" and "Auto Reminder Ticket For, days."
- The "Auto Close Ticket For, days" field determines the time frame within which a ticket will automatically close if there is no resolution or response.
- The "Completed Ticket Statuses" field determines which all tickets with the selected statuses will be marked as closed. Following the closure, an email notifying the customer of the status change will be sent.
- The "Auto Reminder Ticket For, days" field triggers reminders at predefined intervals, ensuring that unresolved tickets receive prompt attention and action.
- Reminder emails will not be sent for tickets with the status selected in the "Completed Ticket Statuses" field.
- These customizable settings contribute to timely resolution and customer satisfaction.
- By systematically handling pending requests within the system, this automated functionality ensures that tickets stay on the radar until they are appropriately addressed.

Technical Requirements / Compatible with:

- Magento Open Source v2.4.x

Supported Languages

English, German, French

Change Log / Release Notes

Version: 1.0.0: February, 2024
