1. Introduction

The FCM Notification Module for Odoo enhances user engagement by integrating Firebase Cloud Messaging (FCM). This module enables sending push notifications to users, ensuring timely updates, reminders, and alerts. By leveraging FCM, businesses can reach their customers directly on their devices for improved communication and user experience.

2. Features

- User-Friendly Interface: Easy setup for configuring Firebase credentials.
- **Multi-Device Support:** User can register and receive notifications on multiple devices.
- Automatic Token Generation: The device token is automatically stored in Odoo and linked to the user.
- **Customizable Notifications:** Personalize message titles, bodies, image, icon, redirect URL for each notification.
- **Real-Time Notifications:** Instantly send push notifications to users' devices.
- **Group-Based Notifications:** Send notifications to all users under the specific group or to all users.
- Multi-Language Support Send notifications in different languages based on user preferences.

3. Working

Firebase Configuration

- 1. Obtain the Project ID from Firebase.
- 2. Download the service account JSON file from Firebase.
- 3. Obtain the VAPID key under Cloud Messaging in Firebase project settings.

4. For further details, refer to the <u>Firebase Cloud Messaging Documentation</u>.

Screenshot 1: Generating the service account file from Firebase.

Screenshot 2: Project details from Firebase.

Odoo Backend Configuration

- 1. Navigate to the Odoo backend.
- 2. Configure Firebase settings within the module by adding all the firebase configurations.
- 3. Ensure that credentials and project details are correctly added.
- 4. Add the service account Json file.

Screenshot 3: Configurations for FCM.

Register Browsers

- 1. Navigate to the Odoo website and Enable push Notifications pop up will be shown.
- 2. By clicking allow, Notification Permission will pop up from browser.
- 3. Click allow for receiving notifications.
- 4. Registration token will be automatically saved in the registered browsers menu.

Send Notification

- 1. Navigate to the Send Notifications menu.
- 2. Select default groups or custom groups for sending notification:
 - a. Internal Users Send notifications to all the internal users.
 - b. Portal Users Send notifications to the portal users.
 - c. Public Users Send notifications to the public users.
 - d. Customer Group Send notifications to the selected group of people.
 - e. All Users Send notifications to every registration token of users.
- 3. Add Title, Message, Language, Image, Icon and Redirect URL.
- 4. For Images, use **2:1 aspect ratio** (e.g., 512x256 or 1024x512) to ensure consistent display across web and mobile platforms.
- 5. For Icons, use a square icon image with a size of 192 × 192 pixels (or at minimum 96 × 96 pixels) and a 1:1 aspect ratio to ensure proper display without trimming in both web and mobile push notifications.
- 6. Click the **Send Notification** button.
