WORLDLINE NW

ABOUT SAFERPAY

Saferpay is the easy, flexible, secure and the comprehensive e-payment solution from Worldline (former SIX Payment Services) for easier and more secure payment in your online shop.

Worldline [Euronext: WLN] is the European leader in the payments and transactional services industry and #4 player worldwide. With its global reach and its commitment to innovation, Worldline is the technology partner of choice for merchants, banks and third-party acquirers as well as public transport operators, government agencies and industrial companies in all sectors. Powered by over 20,000 employees in more than 50 countries, Worldline provides its clients with sustainable, trusted and secure solutions across the payment value chain, fostering their business growth wherever they are.

WORLDLINE NW//

ABOUT MAGENTO MODULE

This module is implemented to integrate Saferpay Payment methods in Magento. It supports the following payment methods of Saferpay to work with default Magento 2 checkout.

- 1] VISA
- 2] MASTERCARD
- 3] MAESTRO
- 4] AMERICAN EXPRESS
- 5] BANCONTACT
- 6] DINERS/DISCOVER
- 7] JCB
- 8] SEPA ELV
- 9] MASTERPASS
- 10] UNIONPAY
- 11] PAYPAL
- 12] TWINT
- 13] PAYDIREKT
- 14] IDEAL
- 15] EPRZELEWY
- 16] APPLE PAY
- 17] ALIPAY
- 18] CREDITCARD (SAFERPAY FIELDS)
- 19 | SOFORT
- 20] GIROPAY
- 21] EPS
- 22] BILLPAY PURCHASE ON RECEIPT
- 23] BILLPAY DIRECT DEBIT
- 24] KLARNA PAYMENTS

25] WL CRYPTO PAYMENTS

26] GOOGLEPAY

27] POSTFINANCE PAY

28] ACCOUNT-TO-ACCOUNT

29] CREDITCARD / DEBITCARD

30] WECHATPAY

31] CLICK TO PAY

32] BLIK

33] REKA

This module supports all the features of online payment methods like invoice capturing, refunding & cancellation. All these payment operations done in the Magento backend will be synced to Saferpay account also.

SUPPORTED LANGUAGES

The module provides translation for German (Germany) (**de_DE**) and English (United States) (**en_US**) locale.

REQUIRMENTS

To install and configure Saferpay module in Magento, the following is required:

- Magento installation with version between 2.4.0 to 2.4.8
- The license for the Saferpay module.
- A valid Saferpay account with at least one active Saferpay terminal through which payments can be carried out

WORLDLINE NIV

- API credentials like Terminal ID, Customer ID, JSON Username and JSON
 Password for the Saferpay Live- and/or Test environment
- Valid acceptance agreement for payment methods.

INSTALLATION

To install Saferpay module follow the steps below.

Step 1: Download Saferpay module extension and unzip it.

Step 2: Access your web server directories and upload the content of the folder into the root directory

Step 3: Run the following commands to complete the installation.

1. Enable the module

php bin/magento module:enable --clear-static-content Saferpay_PaymentService

php bin/magento module:enable --clear-static-content Saferpay_RecurringPayments

(<u>Disable this module if the shop does not use Amasty recurring module</u>)

php bin/magento module:enable --clear-static-content Saferpay_HyvaCheckout (<u>Disable this module if the shop does not use Hyva theme and Hyva Checkout</u>)

2. Update of the database

php bin/magento setup:upgrade

3. Generate and pre-compile classes

php bin/magento setup:di:compile

4. Deploy static files

php bin/magento setup:static-content:deploy

Additional: Install and Build Custom Checkout Style using Tailwind (Hyvä)

WORLDLINE NW//

To apply custom styles for the checkout area (if using **Hyvä Checkout**), follow these additional steps:

Generate Hyvä configuration

php bin/magento hyva:config:generate

Install Node.js dependencies (Tailwind) and build production CSS

cd vendor/hyva-themes/magento2-default-theme/web/tailwind

npm install

npm run build-prod

Ensure npm is installed on your system. If not, install it using your system's package manager or from https://nodejs.org/.

CONFIGURATION

Saferpay module configuration includes two sections

- 1. General configuration
- 2. Payment method specific configuration

GENERAL CONFIGURATION

Configure general module settings from Stores > Configuration > Sales > Saferpay Tab General Plugin information can be viewed from here

General

Version [store view]	1.1.7
API Spec Version [store view]	1.34

- 1. Version: Current Plugin Version
- 2. API Spec Version: Current API Spec version. This gives information about technical features, modifications and enhancements that are integrated

The following configuration options are available in General section

1. Environment: It defines the Saferpay Operation mode. The dropdown will allow merchant to quickly switch between live and test environment. By default, test mode is selected

2. Test Customer ID/Live Customer ID

The unique Customer ID issued by Saferpay for your account. This value is required when the test environment is selected.

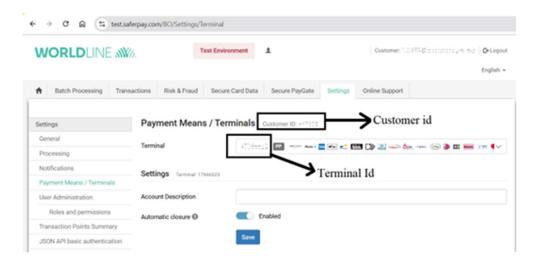

Figure 1

The settings can be found in the Saferpay Backoffice under $Settings \rightarrow Payment Means$ / Terminals (see Figure 1).

3. Test Terminal ID

Terminal ID assigned by Saferpay, which works in conjunction with your Customer ID. The settings can be found in the Saferpay Backoffice under $Settings \rightarrow Payment Means$ / Terminals (see Figure 1).

4. Test JSON Username

API username used to authenticate requests via the Saferpay JSON API.

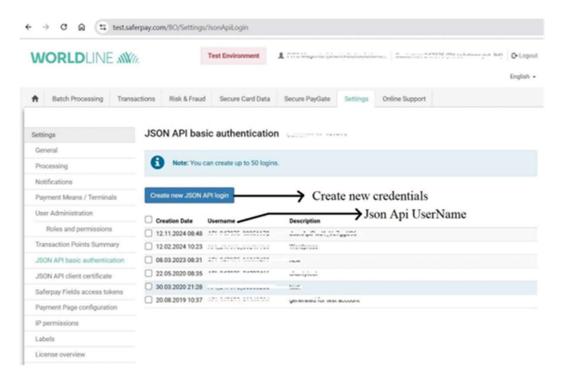

Figure 2

The settings to create or manage a JSON API Username can be found in the Saferpay Backoffice under $Settings \rightarrow JSON$ API Basic Authentication (see Figure 2).

5. Test JSON API Password

The password associated with the above JSON API Username. The settings to create or manage a JSON API Password can be found in the Saferpay Backoffice under Settings \rightarrow JSON API Basic Authentication (see Figure 2).

6. Generate Saferpay Fields access token and url automatically

By enabling this, you can automatically create Access Tokens and Api Url for the Saferpay Fields.

Note: Configuration fields from 1 to 5 must be filled in if you want to create access token automatically. Please see Figure 3.

Environment [store view]	Test Mode	•
	Saferpay Operation mode. If the test mode is selected the test account details is used. Otherwise the configured live account details is used.	
Test Customer ID [store view]	217075	
	The test customer id as given by theSaferpay.	
Test Terminal ID [store view]	17966523	
	The test terminal id as given by the Saferpay.	
Test JSON Username [store view]	AFE_247075_02048504	
	The test JSON username given by the Saferpay.	
Test JSON API Password [store view]	(SonApiPwd1_V-7_o-196	
	The test JSON API password as given by Saferpay.	

Figure 3

WORLDLINE NIV

7. Enter Shop Url

Enter your shop url for which access tokens to be generated.

Example: https://www.yourshopdomain.com

8. Test Saferpay Fields Access Token

Configuration fields 1 to 5 must be filled in, and Configuration field 6 must be set to 'Yes' to generate the Saferpay Fields access token.

This token is essential for initializing Saferpay Fields, primarily used for credit card payments and saved cards.

If not generated automatically, the details can be obtained from Saferpay Backoffice. Please see the Figure 4. A new token can be generated using the 'Create Access Token' button. The existing token can be viewed by clicking 'Details' corresponding to the entry for your shop.

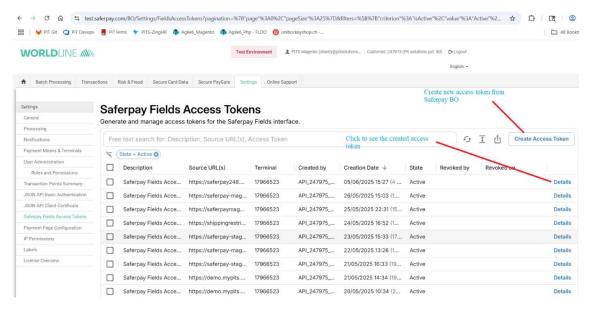

Figure 4

Digital Payments for a Trusted World

WORLDLINE W//

9. Test Saferpay Fields Api URL

The Saferpay Fields API has different base URLs depending on the environment:

- For live, use: https://www.saferpay.com/api
- For testing, use: https://test.saferpay.com/api

When integrating Saferpay Fields, use the following URLs:

- Live environment: https://www.saferpay.com/Fields/[YOUR CUSTOMER ID]
- Test environment: https://test.saferpay.com/Fields/[YOUR CUSTOMER ID]

Make sure to replace [YOUR_CUSTOMER_ID] with your actual Saferpay customer ID.

10. Test Saferpay Fields JS URL

This is the Saferpay Fields Javascript library url. Do not edit this if are unaware of the functionality.

For Test Environment:- https://test.saferpay.com/Fields/lib/1.5/saferpay-fields.js

For Live Environment:- https://www.saferpay.com/Fields/lib/1.5/saferpay-fields.js

11. Test Base URL

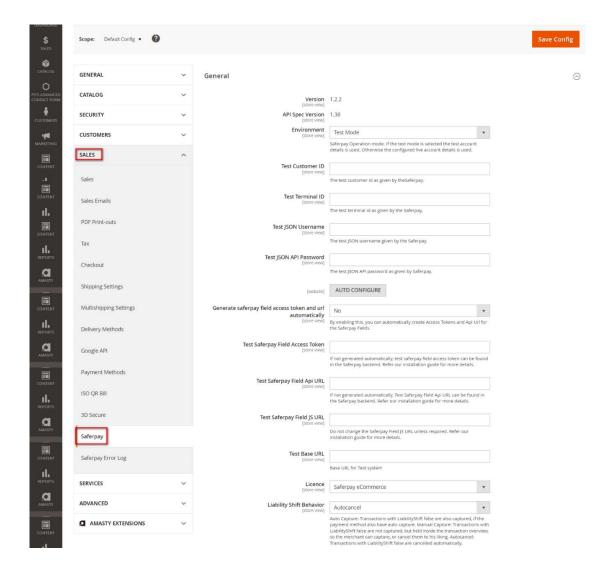

These fields already have default values of Api base url. Do not edit this if are unaware of the functionality.

Base Url for Test System:- https://test.saferpay.com/api

Base Url for Live System:- https://www.saferpay.com/api

WORLDLINE NW//

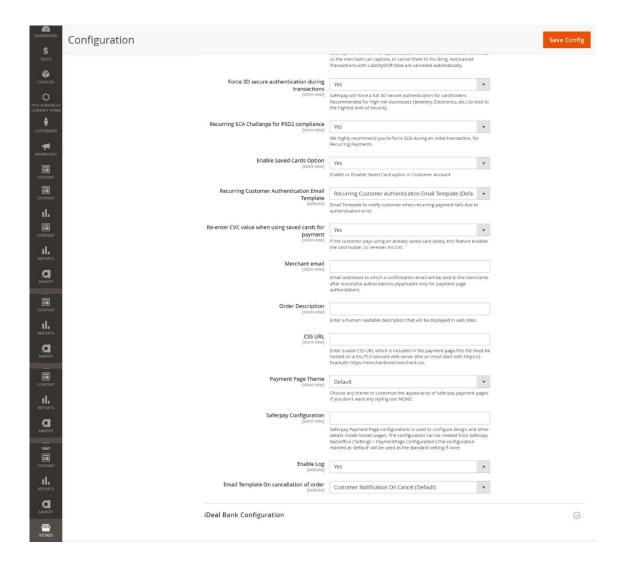

Fields from 2 to 9 may vary based on the operation mode opted. Data is available from Saferpay Backoffice. To get access information for live environment you have to request an offer here. To get access information to test account please follow this <u>link</u>.

AUTO CONFIGURE

Payment methods can be configured automatically by using the "Auto Configure" button. Before you auto configure make sure that all basic configurations are filled out. The available payment methods in your Saferpay customer account will be checked when

Digital Payments for a Trusted World

WORLDLINE NIV

you click auto configure button, and those payment methods will then be enabled. Afterward, you can go to Sales > Payment Methods and make the necessary changes if you want to disable any payments or modify any configurations.

12. Licence: Choose the Saferpay licence you own.

Saferpay has two licenses:

- Saferpay eCommerce
- Saferpay Business

In case you are using Saferpay Business without the corresponding license, the API will throw an error.

13. Liability Shift Behaviour

This field determines how to handle the transactions when Liability Check for card Fails. When using this functionality, the liability shifts to the authorizing bank and the store owner receives no claim for any chargeback if a fraudulent card is used on their website.

It has three options

- Manual Capture: Transactions with false LiabilityShift are not captured, but it gets authorized. Later the merchant can capture, or cancel the order as he wish.
- Autocancel: Transactions with false LiabilityShift are cancelled automatically.
- Auto Capture: Transactions with LiabilityShift false are captured automatically,
 if the capture type of payment method is also set to auto capture. If payment
 method capture type is "Manual Capture", the transaction will not captured,
 instead the transaction is made authorized so that merchant can manually
 capture or cancel his order.

14. Force 3D secure authentication during transactions: If you enable this option, Saferpay will force a full 3D Secure authentication for cardholders. It is recommended for high risk businesses (Jewellery, Electronics, etc.) to stick to the highest level of security.

15. Recurring SCA challenge for PSD2 Compliance

Saferpay module is compatible with Amasty recurring module. This field is applicable only for orders with subscription products. It ensures the PSD2 compliance of the recurring payments done through Saferpay while Amasty extension is enabled.

16. Enable Saved Cards Option

Customers can save their card details in customer account if this configuration is enabled. They will get access to tab "Saved cards".

17. Recurring Customer Authentication Email Template

There is a possibility for payment failure due to soft decline of cards during recurring transaction. During such scenarios this template is used to send email to customers notifying them about transaction error.

18. Re-enter CVC value when using saved cards for payment

This option is used to provide additional security when the customer uses saved cards for the checkout. While this option is enabled, it asks the cardholder to re-enter his CVC if he uses saved card for checkout, and hence the transaction would be fully secure and PCI compliant

19. Merchant email

Email addresses (Merchant email) to which a confirmation email need to be send after successful payment authorizations. (Applicable only for payment page authorization)

20. Order Description

A human readable description provided by the merchant that will be displayed in Payment Page.

21. CSS URL

Enter a valid CSS URL which is included in the payment page. This file must be hosted on an SSL/TLS secured web server (the url must start with https://) Example: https://merchanthost/merchant.css.

22. Payment Page Theme

Choose the theme to customize the appearance of Saferpay payment pages. Per default a lightweight responsive styling will be applied.

23. Saferpay Configuration

Saferpay Payment Page configurations is used to configure design and other details inside hosted pages. The configuration can be created from Saferpay Backoffice ('Settings > PaymentPage Configuration'). The configuration marked as 'default' will be used as the standard setting if none

WORLDLINE NIV

24. Enable Log

All the error details regarding a transaction will be logged to custom log if this option is enabled. Refer Log section for more information

25. Email Template on cancellation of order

There may be possibilities for cancelling authorized transaction due to failed 3Ds check. During such scenarios this template is used to send email to customers notifying them about payment cancellation.

26. GraphQL Support

GraphQL is indispensable for creating Magento PWAs. Saferpay Extension provides GraphQL support so that PWA developers and Mobile app developers can make use of it. This will work for Magento versions from 2.4.0 to 2.4.8

PAYMENT METHOD SPECIFIC CONFIGURATION

Individual payment methods which come under Saferpay can be configured from System > Configuration > Sales > Payment Methods section. Not all payment will be in your contract so be careful while enabling payment methods.

Saferpay specific configuration are explained in detail.

1. Enabled

Enable or Disable payment methods

2. Title

The title displayed to the customer on the store front during checkout.

3. Description

Description for the payment

4. Payment from Applicable Countries

By default, it is set to All Allowed Countries.

5. Payment from Specific Countries

If you wish to accept payment from specific countries, you can select the countries in Payment from Specific Countries.

6. Accepted Currencies

Choose the currencies that can be processed with this payment. If no currency is selected payment will not be available even though it is enabled individually.

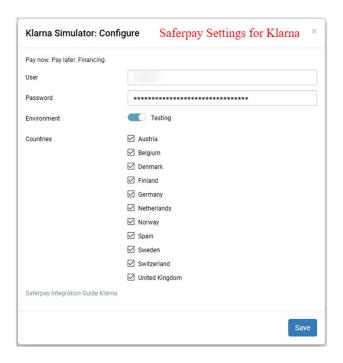

Some payments like Klarna may have country and currency restrictions. So be careful in choosing countries and ensure that these countries are activated in your Klarna payment settings in saferpay account also.

For Klarna to work properly, currency code should be in-line with country code

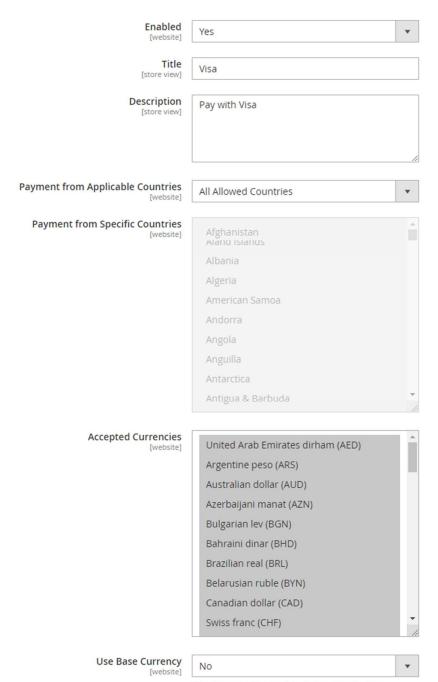

7. Use Base Currency

Defines whether Magento base currency should be used for processing the transaction. If this is enabled, only the payment methods that supports base currency will be listed during checkout.

WORLDLINE W//

Saferpay VISA

This currency will be used for Saferpay transactions.

WORLDLINE MY

Display Payment Id [store view]	Yes	*
	Display Payment ID in order

WORLDLINE W//

8. Authorisation Method

Authorisation Method defines how the payment method is displayed and processed. Some payments support multiple authorisation methods while others support single.

- Payment page During the order processing the user is redirected from the Magento shop to the Saferpay payment gateway to process the payment. On successful completion of the payment the user will be redirected back to the Magento shop. The Saferpay Payment Page Interface is intended for a simplified and universal integration of the payment process by using the PaymentPage payment form. The Saferpay Payment Page can be used both with a Saferpay eCommerce license and with a Saferpay business license. All Saferpay supported payment methods can be processes with the Payment Page Interface.
- Transaction Interface During the order processing the user is served with Saferpay payment forms opened in a lightbox within the Magento shop. The Transaction Interface is an extension to Payment Page Interface. It offers the Hosted Entry Form (HEF) to process card payments seamlessly. This interface can also be used in combination with Secure Card Data to store/tokenize payment data during the payment process. The Transaction Interface is only for holders of a business licence on the live system
- Saferpay Fields will be hosted on Saferpay-side and will offer you a level of flexibility and the possibilities, similar to using your own form. The data is captured by a fully PCI-certified system.

9. Capture Type

This indicated how payment provider should behave when order is created. There are two options:

Autocapture: It will automatically capture the amount in the order.

WORLDLINE W//

- Manual capture: The payment will be authorized, but merchant will have to capture manually form shop Backend
- In Magento from version 2.4.7-p1 to 2.4.8, manual capture and cancelation of invoices may not function as expected. This is Magento issue identified and the following patches address the solution:

<u>Patch for Invoice Cancelation</u>: Addresses issues related to cancelling invoices.

Patch for Manual Invoice Capture: Resolves manual invoice capture problems.

10. Invoice Generation

This field determines when to generate invoice for the payments made through Saferpay if the capture type is set to Manual.

For automatic Captures invoice will be generated instantly after payment in paid state.

- Manual: Invoice should be generated manually by merchant from Magento Backend.
- Automatic: Invoice will be generated automatically upon payment authorize in pending state.

11. Send Invoice Email

If "send invoice" is enabled, invoice email is sent automatically after invoice capture.

12. Pre-Authorize Transaction

When set to true the transaction is processed as pre-authorization otherwise as final authorization. If pre-authorisation is selected, the capture of the payment is prevented even though the capture type is "Autocapture".

13. Show Payment Icon

When enabled, the payment brand icon will be shown in checkout page and order email.

14. Display Payment ID

This field determines whether transaction Id of the payment should be displayed in order confirmation page and order email.

15. Send Customer Address

This option will send customer address to Saferpay.

16. Display card holder name on Saferpay

This parameter let you customize the holder name field on the card entry form. Per default, a mandatory holder name field is shown.

17. Register alias and use during checkout

By enabling this, the customer can register cards and use it for future payments. Card details will be stored in Saferpay. This option is available only for Transaction Interface Authorisation method.

18. Send Customer confirmation email from Saferpay

Confirmation email will be sent to the customer after successful authorizations from Saferpay (Applicable only for payment page authorization)

19. Minimum Order Total

Using this field merchant can set a minimum order limit. If the grand total of the order is less than the Minimum Order Total value, the payment cannot be processed through the payment method.

20. Maximum Order Total

You can specify the maximum amount for the transaction that can be processed through this payment method.

21. Sort Order

This option is for sorting the payment methods to display in the checkout page.

Once you have configured Saferpay payment method, review all the settings carefully. If everything is fine, click Save Config button at the top right corner.

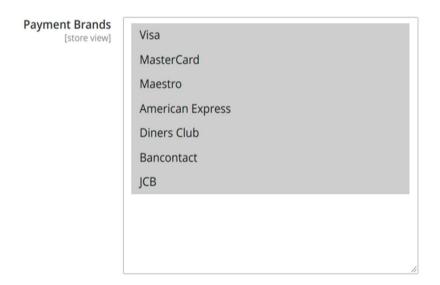

22. Payment Brands

This configuration is available only for Credit Card, Applepay and Googlepay payments. It enables the merchant to choose the payment brands which will be accepted by these payments. By default, all brands are selected.

The selected brands will be accepted only if it supports the currency opted for Saferpay transactions.

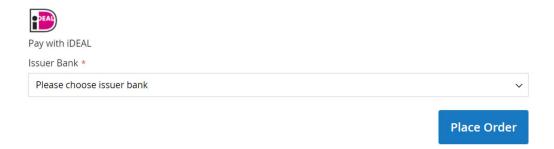

23. Saferpay Fields CSS URL

Configuration specific to Credit Card payment. It defines the url to an external CSS, to be applied to Saferpay Fields if the merchant wants to customize the existing design.

24. Pre-Select issuer bank account

iDEAL Payment allows the customers to pre-select the issuer bank from Magento itself. The customer will be redirected directly to the selected bank and thus skipping the bank selection page during payment process.

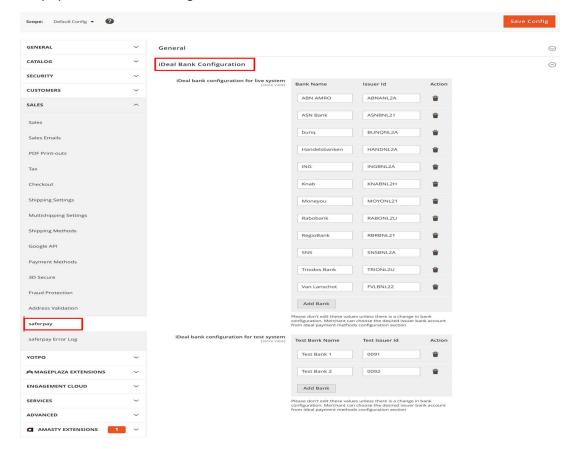

Attention: These Values are issued by iDeal. We have added option to add more bank when Saferpay support more banks in future.

We have provided an interface to edit/add the bank name and issuer Id if needed. You can configure it from the section Admin Panel > Stores > Configuration > Sales > Saferpay > iDeal Bank Configuration section.

Once you have configured Saferpay payment method, review all the settings carefully. If everything is fine, click Save Config button at the top right corner.

This preselect feature can be enable/disable from ideal backend configuration.

WORLDLINE NW//

SAFERPAY FEATURES

DESIGN CUSTOMIZATION

If you want to customize the default design of Saferpay interface, Saferpay provides the following options

1. CSS-Styling

The CSS styling-options can be used over following methods.

- Payment page
- Transaction Interface
- Alias Insert

Note: The CSS file that is referenced by the CssUrl parameter must be stored on a web server that supports HTTPS.

2. Theme

This parameter let you customize the appearance of the displayed payment pages. Per default a lightweight responsive styling will be applied. If you don't want any styling use 'NONE'.

3. Payment Page Configuration

You can create different PP configurations to be applied over Transaction initialize and PaymentPage Initialize. The configuration itself can be created inside the Saferpay Backend under "Settings > Payment Page Configuration".

Note: If a custom CSS is provided, any design related settings set in the payment page config (PPConfig) will be ignored and the default design will be used.

WORLDLINE 11/1/

ORDER MANAGEMENT

CAPTURE PAYMENT

If in the payment configuration "Capture type" is set to "Automatic", merchant don't need to do anything from Magento backend. Payments will be captured automatically by the system and no adjustments is possible for created invoice.

When the "Capture type" is set to "Manual", merchant will have to capture payments manually through backend.

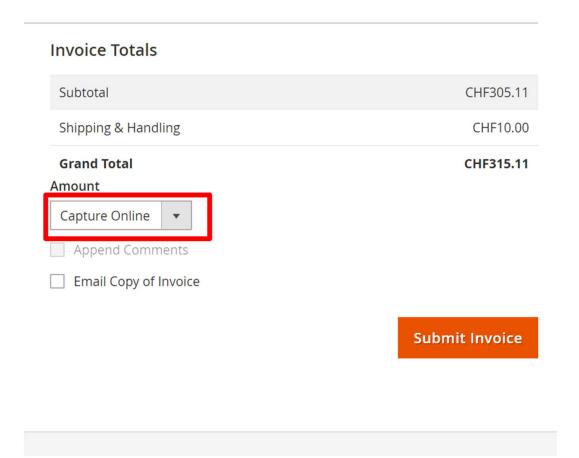

In order to create invoice, follow these steps

- 1. Open the order you want to create invoice
- 2. Click on the invoice option in header of the sales order
- 3. Ensure that Capture Online is selected at the bottom of the Invoice
- 4. Click Submit Invoice. If successful, an invoice will be created.

If the Capture type is set to Manual and Invoice generation to Automatic, then invoice will be created in pending state. All you need to do is to capture that invoice.

MULTIPART CAPTURE

Saferpay offers the option to do Partial Captures on transactions made with only certain payment methods. Magento supports multiple invoices for an order and each invoice can be captured separately. Please note that magneto doesn't support multiple capture of a single invoice.

Multipart capture can be used over following methods

WORLDLINE MY

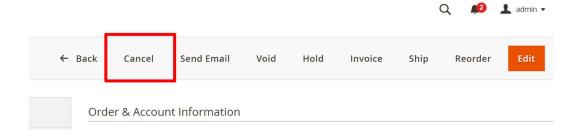

- Visa
- Mastercard
- Maestro
- American Express
- Diners
- JCB
- PayPal
- Klarna
- PostFinance Pay

CANCEL PAYMENT

Only authorized, but not captured orders can be cancelled. Cancellation of an order prevents any future change from being made to it.

In order to cancel an order, click on the Cancel option in header of the sales order.

WORLDLINE NIV

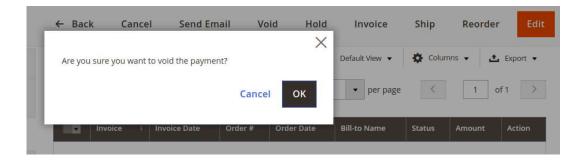

VOID PAYMENT

Authorized transaction can be cancelled by issuing a void in Magento. It will initiate money flow to the card holder by cancelling the transaction and prevent any further online transaction process for that order.

Note: Captured transaction cannot be cancelled but can be refunded.

To Void payment, follow the below steps

- 1. Go to Sales -> Orders and open the order you want to cancellation
- 2. Click on the Void option in header of the sales order and confirm the Void
- 3. Confirm the transaction and if successful it gets cancelled

REFUND PAYMENT

Captured transactions can be refunded. Multiple refunds are possible on each invoice.

In order to refund payment, follow these steps

- 1. Open the order and navigate to invoice section
- 2. Select the invoice that you would like to refund and enter the invoice page by clicking View
- 3. Click on Credit Memo option in the invoice page

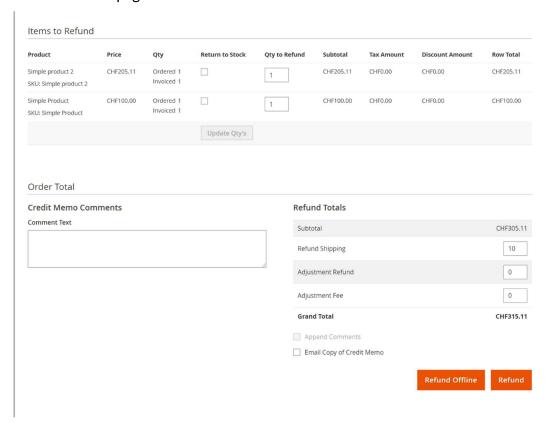

- 4. Adjust the item to refund by editing "Items to refunds" section
- 5. Edit the Refund Totals Section to adjust the amount to refund. It is not possible to refund more than the total order amount.
- 6. Click the Refund button at the bottom of the page.
- 7. If successful, credit memo will be issued.

Note: Online credits can only be issued only from the invoice page in Magento, and not from the Order page.

TRANSACTION OVERVIEW

Transaction overview section provides overview for an order at a glance. This section contains information about sales transaction, 3Ds check and card

ALIAS MANAGER

Alias Manager allows your customer to save the credit card information and to reuse the saved information for future payments.

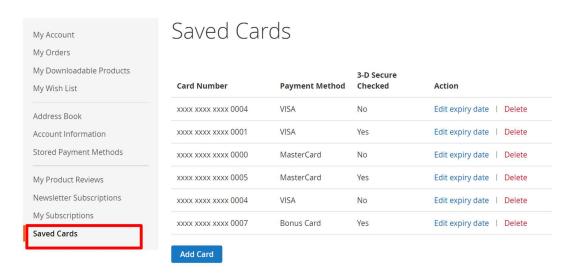

Saferpay Secure Card Data, or SCD for short, is a service for saving sensitive payment means information in the certified Saferpay data center. By using SCD, the payment data is separated from the merchant application and no longer comes into contact with it. The stored secure Card data can be referred from future payments initiated via Transaction" interface.

This feature is available for payment methods that supports secure card data. Sensitive payment data is stored only in certified Saferpay data centre. If the settings, "Register alias and use during checkout" is enabled, logged in customers can save and use their card for future transactions.

In addition to this, customer can manage the saved cards from his customer account.

WORLDLINE NW//

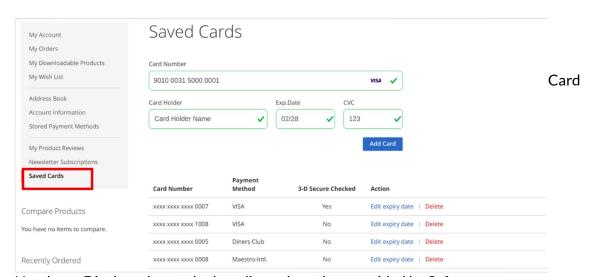

A new tab "Saved Cards" is added in the My Account page of Magento from which customers can add, update and delete cards from his account. Merchant can enable or disable saved card option through general configuration "Enable Saved Cards Option"

Customer can add below types of payment means to customer account

- 1) Cards
- 2) Twint Saved card data is used only for recurring payments
- 3) Postfinace Saved card data is used only for recurring payments

Customer can enter and submit the card data in Saferpay hosted card entry form from the account page. If additional security check is required so as to perform actions like 3D Secure and/or DCC, a Saferpay page will be opened in Lightbox

Number – Displays the masked credit card number provided by Saferpay

Payment Method - Saved card type.

3-D Secure Checked – For some cards like Saferpay do 3D secure check while adding cards. Such cards can be identified from here. Please note that only 3D secured cards can be used for recurring payments if the general settings "Recurring SCA challenge for PSD2 Compliance" is enabled.

Customers have the option to update the expiry date of the card that is already saved.

BACKEND ORDERS

Saferpay payment methods can be used for creating orders from Magento backend. The payments can be processed only through Transaction Interface. So please be careful about the authorization method you opted for corresponding payments.

Follow below steps to create order using backend

- 1. Go to Admin Panel > Sales > Orders and press the Create New Order button.
- 2. Choose the customer you want to create the order for.
- 3. Once you've selected a customer you need to choose which store view you want the order to be created on.
- 4. Add products to order
- 5. Enter Customer Address Information
- 6. Choose the payment and shipping methods

WORLDLINE NW//

You will be redirected to payment gateway after submitting order

	Payment & Shipping Information				
Payment Method		ent Method	Shipping Method *		
Opiners		ners	Flat Rate		
	○ Jcb ○ Fixed - CHF5.00				
	○ American Express				
	Mastercard				
	○ Check / Money order				
	Vis	a			
	0	You will be redirected to payment form after submitting order			

- 7. After reviewing the order click on "Submit Order" button.
- 8. The browser is redirected to the payment gateway. The merchant proceeds to payment by filling in the card details transmitted by the buyer and completes the transaction
- 9. After successful payment the browser is redirected to the order detail page.

CRON FOR CLEARING ABANDONDED ORDERS

When the buyer has not completed the payment and the payment session has expired the order will be in "pending payment" state. A cron is automatically setup for clearing those orders.

As for all the other extensions, make sure you have configured and activated the job scheduler (crontab) as explained in the Magento documentation:

https://experienceleague.adobe.com/en/docs/commerce-operations/configuration-guide/cli/configure-cron-jobs

ERROR LOGS

Error Log section provides information about transactions performed by Saferpay that could not be completed successfully.

Error details provided by payment gateway will be logged and displayed under System > Configuration > Sales > Saferpay Error Log section.

WORLDLINE NW/

RECURRING PAYMENT MODULE

COMPATIBILITY WITH AMASTY RECURRING PAYMENT EXTENSION

This extension offers subscriptions alongside regular products to trigger long-term repeat sales. It allows customers to simultaneously purchase both regular products and subscriptions.

Please refer https://amasty.com/docs/doku.php?id=magento_2:subscriptions-recurring-payments for more information about the extension.

We have implemented Saferpay Magento module to be compatible with the Amasty Recurring payment extension version 2.3.0. After installing the Saferpay and Amasty recurring payment module, all of the Saferpay payment methods will get listed in the Amasty Recurring supported payment gateway list. Only the selected payment methods will be listed in the checkout page for subscription orders.

If your customer adds any subscription product to the cart, only gateway specific payment methods will be available at checkout. Make sure selected payment gateways are properly configured by going to Stores > Configuration > Sales > Payment Methods.

The following Saferpay payment methods are supported for subscription orders.

- 1. VISA
- 2. MASTERCARD
- 3 AMERICAN EXPRESS
- 4. DINERS
- 5. JCB
- 6. BONUS CARD
- 7. MYONE
- 8. CREDIT CARD (SAFERPAY FIELDS)
- 9. Apple Pay
- 10. Google Pay
- 11. Creditcard / Debitcard
- 12. Postfinance Pay- Payment possible only if saved card data available
- 13. Twint Payment possible only if saved card data available

The child subscription orders are created through amasty cronjob. The cronjob is executed every minute and new subscription orders are placed when the scheduled time arrives. If the subscription payment fails, then the subscription gets cancelled. In case of payment failure due to Soft Decline, a mail will be send to customer notifying about the authentication error.

The payment details are saved in the Saferpay account and not managed inside Magento, thus Saferpay module provides complete security of the sensitive payment details of the customers.

LIMITATIONS IDENTIFIED WITH THE AMASTY EXTENSION

Limitation 1: Cannot place the order when the order total is zero

Steps to Reproduce:

- 1] Access shop backend
- 2] Navigate to Stores > configuration > sales > amasty extension
- 3] Enable free shipping for subscription products, Free trial is enabled and charge initial fee is NO
- 4] Ensure that payment method "ZERO SUBTOTAL CHECKOUT" is enabled
- 5] Try to create an order with a subscription product
- 6] Observe that user cannot place the order when the order total is zero

Limitation 2: On creating an order with Grouped subscription product, the order is created as normal order instead of the subscription

Steps to Reproduce:

- 1] Access the shop as a customer.
- 2] Navigate to the grouped product, ensure subscription is enabled for the same.
- 3] Add to cart & sproceed the order.
- 4] Complete order creation
- 5] Check the customer account page.
- 6] The order is not listed @ "My subscription" in the customer account page

Limitation 3: Initial subscription fee for subscription orders with a configurable product or bundle products is wrong

Steps to Reproduce:

WORLDLINE NIV

- 1] Enable Initial subscription fee.
- 2] Create a subscription order with a configurable product or bundle products
- 3] Observe the initial fee subscription in the total summary of the cart page

Limitation 4: Initial subscription fee is displayed in all subscription mails even though this is not valid for the further subscription orders

Steps to Reproduce:

- 1] Enable Initial subscription fee.
- 2] Create a subscription order.
- 3] Observe the subscription mail of the second subscription and further subscription orders.
- 4] The initial fee is displayed in the mail even though it is not valid.

API SPEC VERSION UPDATES

1.19 to 1.23
