

Fastcheckin Manual

Prerequisites

Magento Community 1.9.3.4

Installation

1. Upload the extension files to your store's root directory using FTP/SSH.
2. Login to the backend of your Magento store.
3. Clear the cache in System → Cache Management.
4. Log out of the backend, and log back in again.

Configuration

Navigate to System → Configuration → PITS Extensions → Fast Checkin in your Magento store's backend. There are four main settings in Fastcheckin configuration area:

The screenshot shows the Magento Admin Backend configuration page for the 'Fast Checkin' extension. On the left is a navigation menu with categories: Configuration, GENERAL (General, Web, Design, Currency Setup, Store Email Addresses, Contacts, Reports, Content Management), PITS EXTENSIONS (Fast Checkin, Webapp, Advanced Webapp, ISR System), CATALOG (Catalog, Configurable Swatches). The main content area is titled 'Fast Checkin' and has a 'Save Config' button in the top right. It is divided into two sections: 'General' and 'Attributes'. The 'General' section contains 'Enable Extension' set to 'Yes'. The 'Attributes' section contains: 'Enter the username of customer who does fast checkin' (text input: test@gmail.com), 'Show attribute set selector during fast checkin' (dropdown: Yes), 'Select attributes used for fast checkin' (checkbox list: barcode, name, price, sku), and 'Select attribute code of barcode/unique attribute' (dropdown: sku). Each input field has a '[STORE VIEW]' link to its right.

1. Enable Extension

Choose yes to enable the extension

2. Enter the username of customer who does fastcheckin

Here, customer refers to the customer account created in the name of the (warehouse) employee who will perform checkin. The email address of this customer account is used as username here.

For creating a new fastcheckin account, go to Admin > Customers > Manage Customers > Add New Customer

NOTE: Make sure customer is not associated to admin and 'Is warehouse customer' attribute is set to 'YES'.

3. Show attribute set selector during fastcheckin

If 'YES' then an attribute set selector will be provided during fastcheckin process. If all products belong to the same attribute set, then set it to 'NO' to reduce an extra step from the fastcheckin process.

If set to 'NO', an additional select will appear below this, enabling selection of the default attribute set to be used for all fastcheckin products.

3. Select attributes used for fast checkin(Select all user defined required values)

Multiselect. Choose attributes which should be requested during fastcheckin process.

4. Select attribute code of barcode/unique attribute

Choose the attribute which is used as 'barcode'. If using barcode reader and needed a separate unique identifier for products, create new unique attribute and select that attribute. Use sku if don't need additional attribute. If a barcode reader is used to read a value into this field and then Magento recognizes that a product already existing in the catalog has the same value for this attribute, then the new product is not added to catalog. Instead the quantity of the currently existing product is incremented. In this case, only unique attribute value and quantity are required.

Apply default theme

Apply 'default/default' theme to fastcheckin website.

Choose Language

Choose German/ French language at System → Configuration → General → Locale Options for the current store.

NOTE: Make sure the module is properly configured before attempting to use the fastcheckin functionality.

Using the Extension

1. Enter following path in browser to access Fastcheckin,

path: <your-magento-homepage-url>/fastcheckin/user/login

2. Enter password of warehouse employee(customer account) to login

Fastcheckin Anmelden

Geben Sie Ihr Passwort Ein

3. Fastcheckin products with required attribute set.

Produkt schnell einchecken

Wählen Sie Attributsatz

Name

Preis

SKU 

Qty

Enter product details for fastcheckin. Use device's camera to scan unique attribute value by clicking camera icon. Focus on barcode and take a picture.

Please ensure that the required attribute set has been created and that the correct attribute set is selected during this process, since once a product is assigned an attribute set and 'Checkin' is selected, it cannot be reversed.

Reset button resets all field values.
