

CMS Block Rules Extension for Magento 2

Product specification

The CMS Block Rules Extension allows shop admin to set customer group specific CMS blocks and make them active for a specific time period. When adding a new CMS block or editing an existing CMS block, shop admin can select customer group from the multi-select list and it will be shown only for those specific groups in frontend. Shop admin can also choose a 'Active From' and 'Active To' date for CMS blocks to display in frontend for a specific period.

Features

- Create CMS blocks based on customer group.
- Set a CMS block to be activated for a specific time period using 'Active From' and 'Active To' date fields.
- CMS blocks can be saved as disabled for future 'Active From' date in backend and will be enabled automatically on that date.
- All existing CMS blocks will be available for all customer groups initially, unless specific selection is done.

Pre-requisites

Magento 2.3.x or 2.4.x.

Installation

To install the module, follow the steps below.

Step 1: Download the module/extension and unzip it.

Step 2: Access your web server directories and upload the content of the folder into `app/code/Pits/CMSRule/` directory.

Step 3: Run the following commands to complete the installation.

1. Enable the module - `php bin/magento module:enable`
2. Update of the database - `php bin/magento setup:upgrade`

3. Generate and pre-compile classes - `php bin/magento setup:di:compile`

4. Deploy static files - `php bin/magento setup:static-content:deploy`

6	Women Left Menu Block	women-left-menu-block	All Store Views	Enabled	Dec 27, 2022 11:32:03 PM	Dec 27, 2022 11:32:03 PM	Select	NOT ASSIGNED
7	New Left Menu Block	new-left-menu-block	All Store Views	Enabled	Dec 27, 2022 11:32:03 PM	Dec 27, 2022 11:32:03 PM	Select	NOT ASSIGNED

Initially the block will be working as Magento default functionality because the block is not assigned to any particular customer group.

There is an option to select 'Active From' and 'Active To' date from which the block should be active. If the 'Active From' date is greater than current date, it will not get active. Also, the block automatically gets active when the 'Active From' date is reached and the block automatically gets disabled when 'Active To' date is reached. The module sets a cron job for that.

Note: Need to set the default magento cron for the shop which uses the module.

[Edit with Page Builder](#)

Home page checking.

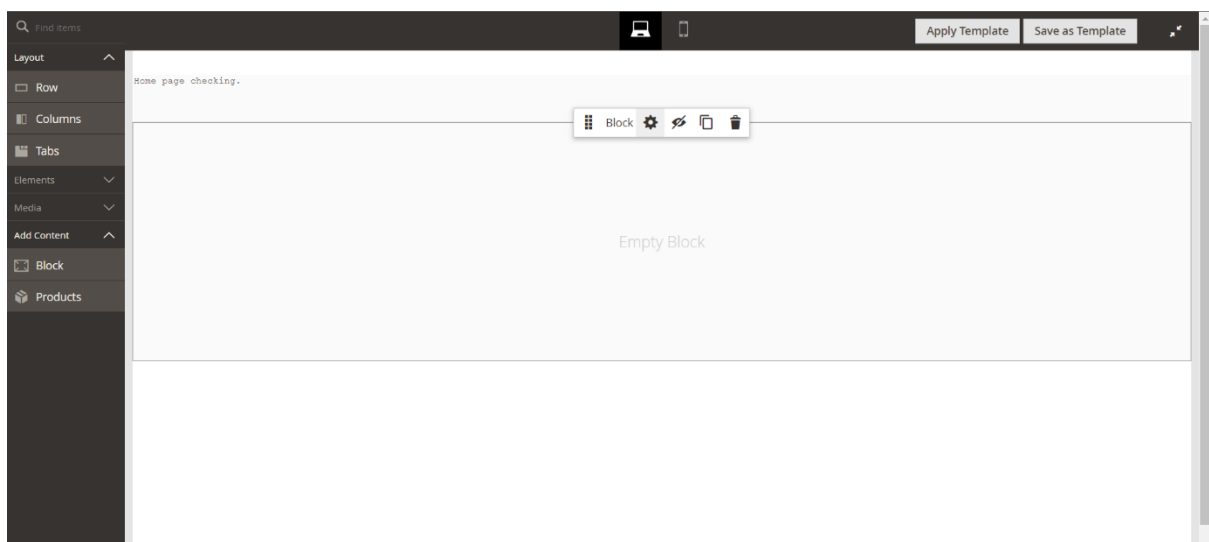

Note: Keyboard shortcut to activate editor help : Alt + 0 (Windows) or ⌘0 (MacOS)

Search Engine Optimization

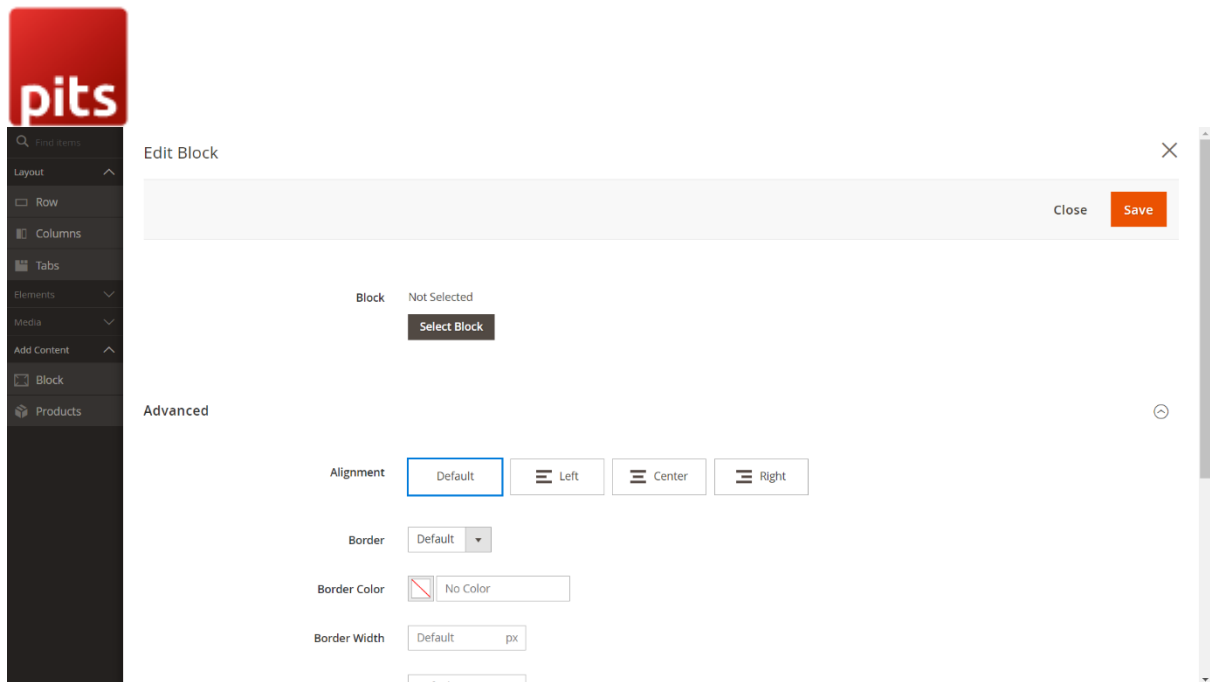

Select 'Edit with page Builder' from 'Content'.

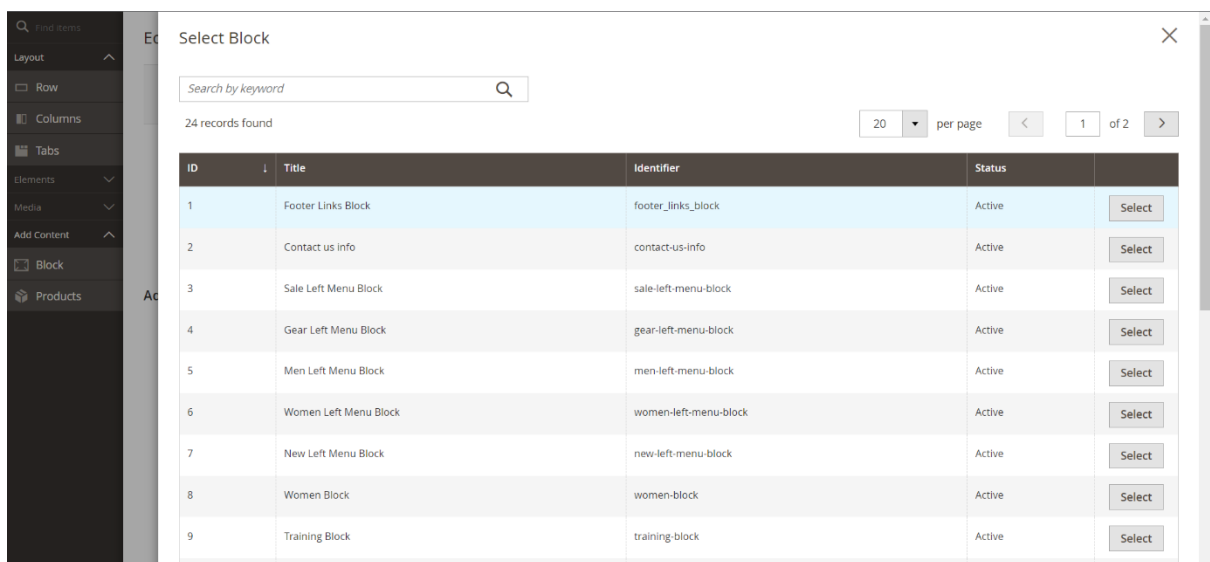

Drag and drop 'Block' from 'Add Content' section from the left side.

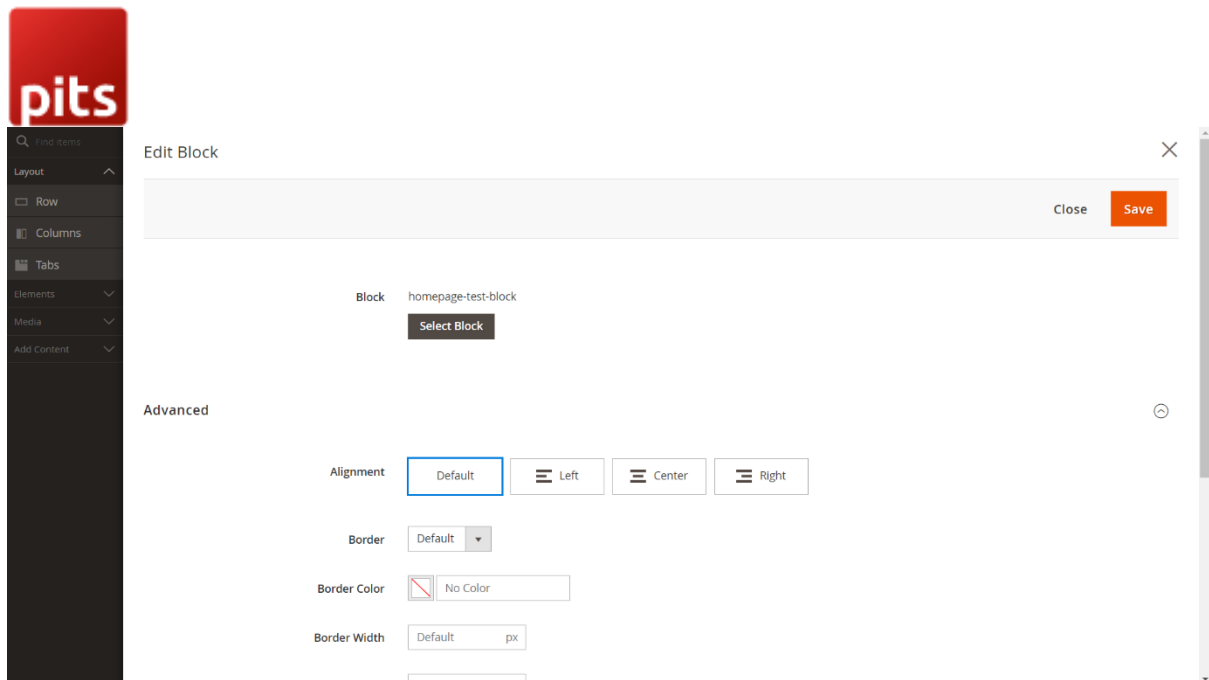

Select the gear icon for editing.

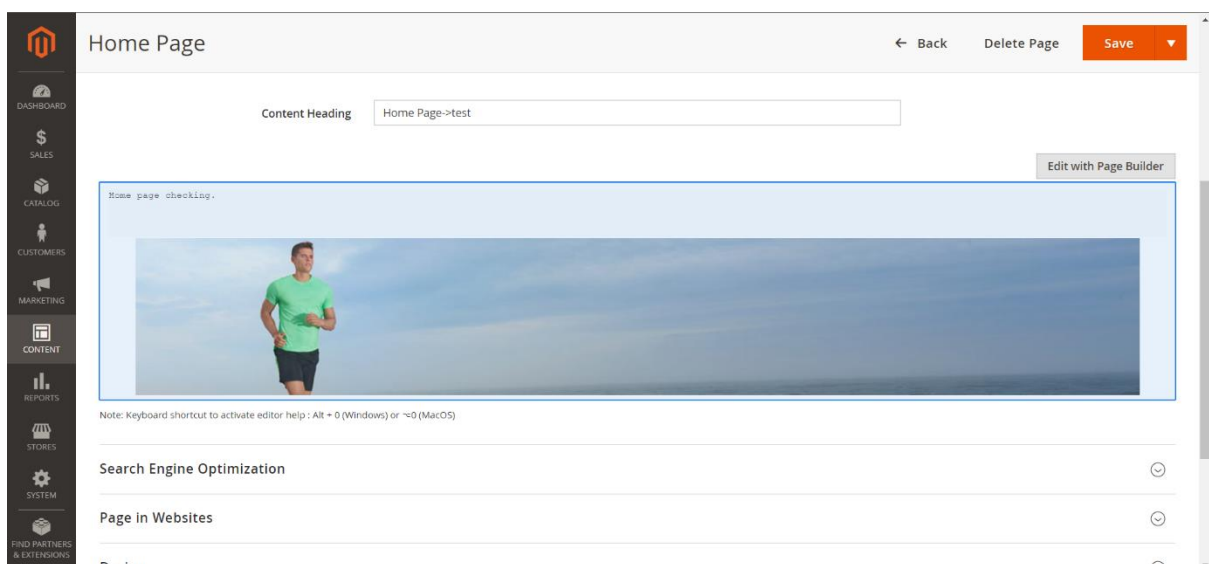

Click the 'Select Block' button to add a block from the list.

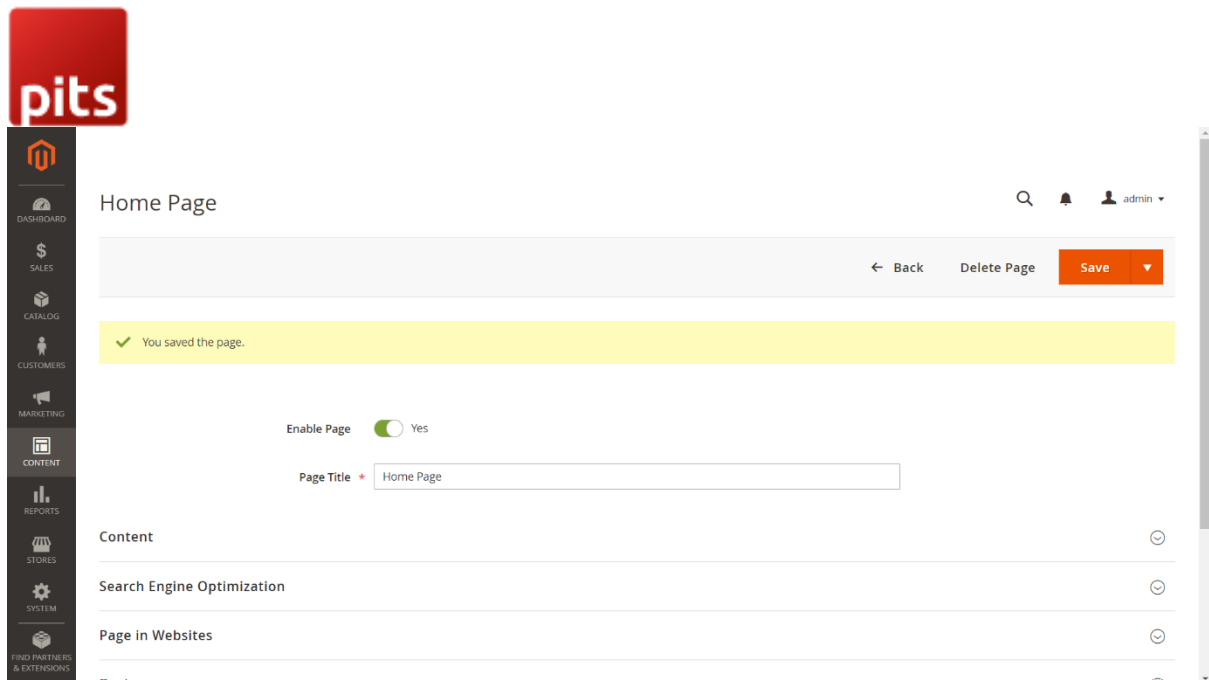

Select the block using 'Select' button.

After selecting and setting the display settings from 'Advanced' section click on 'Save' button.

After closing the page builder, the block will show in the content section.

After all changes to page, we can save the page using 'Save' button.

Note:

We can also add CMS blocks in other cms blocks and pages using:

```
{{block class="Magento\Cms\Block\Block" block_id="block_identifier"}}
```

We can add CMS block in phtml and xml layout file also,

In phtml:

```
<?php
```

```
echo $this->getLayout()
```

```
->createBlock('Magento\Cms\Block\Block')
```

```
->setBlockId('your_block_identifier')
```

```
->toHtml();
```

?>

In XML:

```
<referenceContainer name="content">

    <block class="Magento\Cms\Block\Block" name="block_identifier">

        <arguments>

            <argument name="block_id" xsi:type="string">block_identifier</argument>

        </arguments>

    </block>

</referenceContainer>
```

After the changes has been made, flush the cache in the backed and load it in frontend to see the changes.

The screenshot shows the 'Cache Management' page in the Magento admin interface. At the top, there are buttons for 'Flush Cache Storage' and 'Flush Magento Cache'. A yellow message bar indicates 'The Magento cache storage has been flushed.' Below this, there is a table with 14 records found. The table has columns for 'Cache Type', 'Description', 'Tags', and 'Status'. All status values are 'ENABLED'.

Cache Type	Description	Tags	Status
<input type="checkbox"/> Configuration	Various XML configurations that were collected across modules and merged	CONFIG	ENABLED
<input type="checkbox"/> Layouts	Layout building instructions	LAYOUT_GENERAL_CACHE_TAG	ENABLED
