1. Introduction

The purpose of this document is to present a detailed description of Saferpay. It will explain the purpose and features of the system, the interfaces of the system, what the system will do, the constraints under which it must operate, and how the system will react to external stimuli. This document is intended for both system stakeholders and developers and will serve as the foundation for software development.

2. Saferpay

Easy, flexible, secure - The comprehensive e-payment solution from Worldline for easier and more secure payment in your online shop.

Saferpay is a comprehensive e-payment solution for easy and secure payment in your online shop. Saferpay allows you to process all common national and international payment methods in your online shop– via just one single interface. With just a few clicks, the solution can be quickly and flexibly integrated into most shop systems.

This Odoo module is compatible to work with Saferpay payment methods. This supports the following payment methods and workflows of Saferpay.

- VISA
- MASTERCARD
- MAESTRO
- AMERICAN EXPRESS
- BANCONTACT
- DINERS
- JCB
- EPS
- KLARNA

- UNIONPAY
- PAYPAL
- TWINT
- IDEAL
- EPRZELEWY
- ALIPAY
- GOOGLEPAY
- APPLEPAY
- POST FINANCE PAY
- ACCOUNT-TO-ACCOUNT
- SEPA ELV
- WECHAT PAY
- SAFERPAY CREDIT/DEBIT

Support all Saferpay features, including the payment page, transaction interface, Saferpay fields, saved card functionality, refund, and cancellation. Additionally, ensure multi-website compatibility.

3. Configurations and Requirements

- ODOO working environment.
- License for Saferpay module.
- Before the installation, you must have a valid account on the Saferpay terminal.
- API credentials for Saferpay (Terminal ID, Customer ID, API Username and API Password) for Live and Test environment.
- A Valid Acceptance Agreement for payment Methods and credit cards.

4. General Configurations in the Backend

We can set the Saferpay configurations data by navigating to *Invoicing* → *Configuration* → *Saferpay Provider Configuration*.

- **Production Url:** We can set the production URL.
- **Test Url:** - We can set the Test URL of Saferpay, this is used to switch the Test/production environment.
- **Customer ID:** Set the Customer Id of the Saferpay account.
- **Terminal ID:** Set the Terminal Id of the Saferpay account.

We can get the payment means and terminals from the menu *Settings* → *Payment Means / Terminals* in Saferpay Backoffice.

The screenshot displays the Saferpay Backoffice interface. At the top, there is a navigation bar with tabs: Home, Batch Processing, Transactions, Risk & Fraud, Secure Card Data, Secure PayGate, Settings (active), and Online Support. On the left, a sidebar menu lists various settings categories: Settings, General, Processing, Notifications, Payment Means / Terminals (active), User Administration, Roles and permissions, Transaction Points Summary, JSON API basic authentication, JSON API client certificate, Saferpay Fields Access Tokens, and Payment Page configuration. The main content area is titled 'Payment Means / Terminals' and contains several sections:

- Customer ID:** A text input field with a red box around it.
- Terminal:** A dropdown menu showing '(ecommerce inp)' with a red box around it.
- Settings:** A section with a 'Terminal:' label and a red box around it.
- Account Description:** A text input field containing 'ecommerce inp'.
- Automatic closure:** A toggle switch set to 'Enabled'.
- Fraud Intelligence on this terminal:** A toggle switch set to 'Enabled'.
- Save:** A blue button at the bottom.

Figure 1 - General Configuration

- **API Username:** Set the API Username.
- **API Password:** Set the API Password, we can create new API login from Saferpay Backoffice, *Settings* → *JSON API basic authentication* → *Create new JSON API login*.

The screenshot shows the 'JSON API basic authentication' settings page in the Saferpay Backoffice. The left sidebar contains a menu with options: Settings, General, Processing, Notifications, Payment Means / Terminals, User Administration, Roles and permissions, Transaction Points Summary, JSON API basic authentication (highlighted), JSON API client certificate, Saferpay Fields Access Tokens, Payment Page configuration, IP permissions, and Labels. The main content area has a header with 'JSON API basic authentication' and a 'Customer ID' field. Below this is a note: 'Note: You can create up to 50 logins.' and a 'Create new JSON API login' button. A table lists existing logins with columns: Creation Date, Username, and Description. The table contains six entries with dates ranging from 02.09.2019 to 19.06.2023.

Creation Date	Username	Description
19.06.2023 16:01	SAFEPAY-JSON-API-LOGIN	SAFEPAY-JSON-API-LOGIN
11.10.2022 13:03	SAFEPAY-JSON-API-LOGIN	SAFEPAY-JSON-API-LOGIN
18.08.2021 08:16	SAFEPAY-JSON-API-LOGIN	SAFEPAY-JSON-API-LOGIN
12.02.2021 07:16	SAFEPAY-JSON-API-LOGIN	SAFEPAY-JSON-API-LOGIN
15.04.2020 11:48	SAFEPAY-JSON-API-LOGIN	SAFEPAY-JSON-API-LOGIN
02.09.2019 09:39	SAFEPAY-JSON-API-LOGIN	SAFEPAY-JSON-API-LOGIN

Figure 2 – Retrieving JSON API Keys

- **API Key:** Set the API key that is used for Saferpay Fields.

We can create new API Tokens in the Saferpay Backoffice, from menu *Settings* → *Saferpay Fields Access Tokens*.

The screenshot shows the 'Saferpay Fields Access Tokens' settings page in the Saferpay Backoffice. The left sidebar contains a menu with options: Settings, General, Processing, Notifications, Payment Means / Terminals, User Administration, Roles and permissions, Transaction Points Summary, JSON API basic authentication, JSON API client certificate, Saferpay Fields Access Tokens (highlighted), Payment Page configuration, IP permissions, and Labels. The main content area has a header with 'Saferpay Fields Access Tokens' and a 'Customer ID' field. Below this is a note: 'Note: You can create up to 50 Saferpay Fields Access Tokens.' and a 'Create Saferpay Fields Access Token' button. A table lists existing tokens with columns: Access Token, Terminal, Created by, and Creation Date. The table contains five entries with creation dates ranging from 24.05.2024 to 06.09.2024.

Access Token	Terminal	Created by	Creation Date
SAFEPAY-FIELDS-ACCESS-TOKEN-1	SAFEPAY-TERMINAL-1	SAFEPAY-JSON-API-LOGIN	06.09.2024 08:50
SAFEPAY-FIELDS-ACCESS-TOKEN-2	SAFEPAY-TERMINAL-1	SAFEPAY-JSON-API-LOGIN	24.07.2024 10:22
SAFEPAY-FIELDS-ACCESS-TOKEN-3	SAFEPAY-TERMINAL-1	SAFEPAY-JSON-API-LOGIN	24.07.2024 09:49
SAFEPAY-FIELDS-ACCESS-TOKEN-4	SAFEPAY-TERMINAL-1	SAFEPAY-JSON-API-LOGIN	11.06.2024 08:02
SAFEPAY-FIELDS-ACCESS-TOKEN-5	SAFEPAY-TERMINAL-1	SAFEPAY-JSON-API-LOGIN	24.05.2024 12:19

Figure 3 – Retrieving Saferpay field access token

- **Liability Shift Behaviour:** If the liability shifts (liability shift is used to check this transaction is done by any fraud user) of the card gets failed, then the workflow proceeds with this setting, there are two liability shift behaviours, they are,
 - Hold
 - Cancel

Note: If no option is selected, the capture settings of the respective payment method will be applied by default.

Force 3D secure authentication during transactions: If enabled, Saferpay will ensure a Forced 3ds authentication. The 3ds authentication type is also displayed in Transaction overview section.

- **Payment Method Synchronization:** Automatically retrieves and configure all available payment methods from the Saferpay account.
- **Customer License:** Fetches license package and features details from Saferpay and adds them under *Invoicing-> Configuration -> Saferpay Provider Configuration -> Customer License*.
- **Create API Key:** Generates the API key required for Saferpay field functionality.
- **Send Status Email:** Sends status update emails to customer.
- **Update Payment Method Logo From Saferpay(svg):** If this field is enabled, the system will automatically run a weekly cron job to update the payment provider's logo. If disabled, a static image will be used instead.

The screenshot shows the Odoo Configuration menu with 'Saferpay Provider Configuration' highlighted. The main view displays payment transaction details for 'INV/2024/00015' and a 'SAFERPAY INFO' section.

- Logging: List of all logs regarding the API call.

5. Payment Method Configurations

We can configure the payment methods for Saferpay from the menu *Invoicing* → *Configuration* → *Payment Methods*, as shown in the figure.

The screenshot shows the Odoo Invoicing Configuration menu. The 'Payment Methods' option is highlighted with a red box. The menu includes options like 'Add a Bank Account', 'Accounting', 'Taxes', 'Journals', 'Currencies', 'Fiscal Positions', 'Journal Groups', 'Tax Groups', 'Online Payments', 'Payment Providers', 'Payment Methods', 'Payment Tokens', 'Payment Transactions', 'Saferpay Ideal IssuerId Config', 'Saferpay Provider Configuration', 'Saferpay Provider Logging', 'Management', and 'Product Categories'. The 'Payment Methods' option is the one to be selected for configuration.

Figure 6 - Payment Methods list view

Figure 7 - Payment Method Form View

Here we can set the allowed currency and code that are used for Saferpay transaction.

- Saferpay Code: Code that is used for Saferpay communication. To identify the payment method used for the transaction.
- Allowed Currencies: Used to set up the predefined currencies to that payment method.

6. Provider Configurations in Backend

- We can set the acquirers/payment methods for Saferpay from the menu *Invoicing* → *Configuration* → *Payment Providers*, as shown in the figure.

Figure 8 – Payment Providers Kanban View

The screenshot shows the Odoo 'Payment Providers' form for 'Saferpay - AMEX'. The form is divided into several sections:

- Header:** Includes navigation tabs (Invoicing, Customers, Vendors, Reporting, Configuration) and a status bar (Published, Saferpay Logging, Business License).
- Form Title:** 'Saferpay - AMEX' with an American Express logo.
- Code:** 'Saferpay'.
- State:** Radio buttons for 'Disabled', 'Enabled' (selected), and 'Test Mode'.
- Website:** A text field for the provider's website.
- Configuration Tabs:** 'Credentials', 'Configuration' (active), and 'Messages'.
- PAYMENT FORM:**
 - Payment Methods:** 'AMEX' is selected.
 - Enable Payment Methods:** A link to enable payment methods.
 - Allow Saving Payment Methods:** A checked checkbox.
 - Capture Amount Manually:** An unchecked checkbox.
- PAYMENT FOLLOWUP:**
 - Payment Journal:** A dropdown menu with 'Bank' selected.
- AVAILABILITY:**
 - Maximum Amount:** '\$ 0.00'.
 - Currencies:** 'CHF', 'EUR', and 'USD' are selected.
 - Countries:** A text field with the instruction 'Select countries. Leave empty to make available everywhere.'

Figure 9 - Payment Providers form view

Here we can set the Odoo default configurations for providers:

- **Payment Journal:** Used to set up the Journal used for this provider.
- **Capture Amount Manually:** If selected then the manual capture option gets activated for that provider.
- **Allow Saving Payment Methods:** - An option that enables the card to be saved for future transactions from checkout page and from My Account -> Payment Methods.
 - **Tokenization:** This option is used along with the Allow Saving Payment methods feature. Go to related payment method of the provider -> *Configuration* -> *Enable "Tokenization Supported"* checkbox. This enables users to decide whether to save the card while making payment.
 - **My Account save card permission for Portal Users:** Go to *Settings* -> *Technical* -> *Access Rights*. Provide full access to Portal users for `payment.token.system` and `payment.provider.system`.

- **Payment Methods:** -Used to display the Supported payment methods. We get the Allowed Currencies and Code for Payment provider from payment methods.

7. Configurations Only for Saferpay Providers

- **Need Order Limit:** If checked we can set the minimum and maximum order limits.
- **Send Customer Address:** Used to decide to send the customer delivery and billing address to Saferpay back office.
- **Support Notify URL:** It is used to set this acquirer's support Notify URL.
- **Customer Confirmation email:** It is used to determine whether a customer confirmation email is needed. Saferpay sends the mail only if the customer is redirected to Saferpay payment page. Emails for DCC transaction will be sent on all payment interfaces.
- **Allowed Currencies:** The Allowed Currencies are loaded from Payment methods, the listing of payment methods on the payment page depends upon this currency. If the shop currency is not listed in these allowed currencies, then it is not listed on the shop payment page.

- **Payment Interface:** It is used to change the payment interface, there are 3 options:
 - **Payment page:** - If enabled, then the checkout page will direct to the Saferpay Payment page.
 - **Transaction Interface:** - If enabled, then the checkout page will load the transaction interface (I-frame).
 - **Saferpay Fields:** If enabled, payment can be proceeded with Saferpay Fields. The workflow is the same as an I-frame, the data is captured by a fully PCI-certified system.
- **Register Payment Type:** This is used to define the type of payment method/acquirer, it is more important for saving cards. Which are,
 - CARD
 - BANK_ACCOUNT
 - POSTFINANCE
 - TWINT
- **Support Refunds:** It is used to specify whether this acquirer supports refunds.
- **Smart Buttons:**
 - **Saferpay Logging:** List of all logs regarding the API call used for this acquirer.
 - **Business License:** This is used for license switching, e-Commerce, and Business license.

8. Payment Interface

- Go to menu *Invoicing* → *Configuration* → *Payment Providers*, choose the acquirer. Then the configuration of the payment method is as shown in the figure below.

The screenshot shows the configuration page for a payment provider. It is divided into two main sections: 'PAYMENT FORM' and 'AVAILABILITY'.

Figure 13- Manual/Multipart Capture

- Finalize Capture (Manual Finalization of Partial Captures):** When a merchant has performed one or more partial captures but does not intend to capture the remaining authorized amount — for example, when certain ordered items are out of stock — the "Finalize Capture" button can be used to close the authorization. This calls the Saferpay MultipartFinalize API, releases the remaining uncaptured funds back to the customer, and marks the transaction as finalized in Odoo. The Invoice and Sale Order will reflect only the actual captured amount as paid. The Finalize Capture button is available on the Payment Transaction, Sale Order, and Invoice forms.

The screenshot shows the Odoo interface for a 'Multipart Capture' transaction. The top navigation bar includes 'Sales', 'Orders', 'To Invoice', 'Products', 'Reporting', and 'Configuration'. The breadcrumb trail is 'Sales / S00051 / INV/2026/00006'. The transaction ID is 'S00051'. The status is 'Authorized'. The 'Finalize Capture' button is highlighted. The transaction details include:

- Partial Refund Support for Standard and Multipart Capture Transactions**

The system supports **partial refunds for both standard transactions and multipart capture transactions** by allowing users to enter the desired refund amount. The refund is processed against the original transaction while ensuring that the refund amount does not exceed the remaining captured amount.

Key highlights of this feature include:

- Users can perform multiple partial refunds until the total captured amount is fully refunded.
 - Partial refunds are supported for both regular captured transactions and multipart capture transactions.
 - Each refund is processed as a referenced refund against the original transaction.
 - The system tracks captured, refunded, and remaining refundable amounts to ensure accuracy and prevent over-refunding.
- Important Note:** Some payment methods may not support direct refunds. It is essential to consult the Saferpay documentation before configuring these options to ensure compatibility and proper setup.
 - To process a refund for multiple credit notes, select the credit notes for which

you want to initiate the payment. Then, click on the **Register Payment** option. This action will create individual refund payment transactions for each selected credit note.

12. Saferpay Multi-website Backend configuration

- If no website is mapped against a payment provider, it will be available for all website domains.
- For multi-website configuration, need to create multiple Saferpay payment Provider by duplicating the existing Saferpay payment Provider.

- After creating the Saferpay payment Provider, map the respective website and add the Saferpay credentials.

- For multi-website functioning, it is necessary to set the domain for the websites.

Website Name	Website Domain	Default Language	Theme
My Website	example.com	English (US)	
My Website 2	example2.com	English (US)	

13. Brief Description

For the smooth functioning of this plugin, there are a few configurations that need to be done in the backend.

- Setting up Saferpay Provider Configuration is the initial step where the Terminal ID, Customer ID, API Username, API Password, API Key of your Saferpay web administration tool must be provided.
- The Saferpay payment methods will be listed on the shop payment page.
- Choose the Saferpay payment method, pay from the Saferpay payment page, and get back to the Odoo webshop.

Initial step-by-step description

Prerequisites: Before integrating the Saferpay payment Acquirer plugin make sure that you have a Saferpay web administration tool.

The interface with which you can easily verify and process transactions. API Username, API Password, API Key are the details we need from the webadmin tool for Odoo backend configuration.

Step 1: Install the Saferpay Payment Plugin.

Step 2: Add the Saferpay credentials (Terminal ID, Customer ID, API Username, API Password, API Key) in the Saferpay Acquirer Configuration record in the Odoo backend configuration.

Step 3: Click on “Payment method synchronization” button to automatically configure and enable available payment methods or can manually enable desired payment providers.

Step 4: Go to the e-commerce website, add products to the cart, and proceed to checkout.

Step 5: Choose the Saferpay payment method and click Pay now.

Step 6: Complete the transaction by filling out the necessary details on the Saferpay Payment Page.

Step 7: The order is placed on a successful payment transaction.

Step 8: Multi-Website Configuration:

- To set up Saferpay for multiple websites, duplicate the Saferpay Provider configuration using the Duplicate button.

Step 9: Map and Configure Multiple Websites:

- Map the duplicated Saferpay Provider to the respective websites and enter the appropriate credentials for each.

Step 10: Set Domain for Websites:

- Ensure each website’s domain is correctly set up in Odoo for proper multi-website functionality.

14. Technical Requirements / Compatible With:

- **Technical Requirements:** Odoo Sales, Payment, Contact, and Website modules.
- **Compatibility:** Supports Odoo 17 Community and Enterprise editions.
- **Supported API:** Saferpay JSON API version 1.40.

15. Changes Log / Release Notes

- **Version 2.0.4: September 2026**
 - Added support for partial refund on multipart captured transactions.
- **Version 2.0.3: March 2026**
 - Introduced Manual Finalization of Partial Captures (Finalize Capture).
- **Version 2.0.2: June 2025**
 - Enhanced access rights management for both Administrators and Users, ensuring more granular control and improved security.
- **Version 2.0.1: February 2025**
 - Improvements and Odoo Enterprise edition compatibility.
- **Version 2.0.0: October 2024**
 - Updated to JSON 1.40.
 - Added support for Account-to-Account, SEPA ELV, and WeChat Pay providers.
 - Introduced multi-website support.
- **Version 1.0.0: September 2024**
 - Initial release.
