ABOUT SAFERPAY

Saferpay is the easy, flexible, secure and comprehensive e-payment solution from SIX Payment Services for easier and more secure payment in your online shop.

Worldline [Euronext: WLN] is the European leader in the payments and transactional services industry and #4 player worldwide. With its global reach and its commitment to innovation, Worldline is the technology partner of choice for merchants, banks and third-party acquirers as well as public transport operators, government agencies and industrial companies in all sectors. Powered by over 20,000 employees in more than 50 countries, Worldline provides its clients with sustainable, trusted and secure solutions across the payment value chain, fostering their business growth wherever they are

SIX Payment Services has been part of Worldline since the end of 2018, making it Europe's largest technology partner for banks and merchants. The tailor-made solutions from SIX Payment Services include a broad portfolio of payment terminals and the acceptance and processing of national and international payments with credit, debit and prepaid cards as well as the smartphone.

ABOUT WORDPRESS PLUGIN

This plugin is implemented to integrate Saferpay Payment methods in WooCommerce. It supports the following payment methods of Saferpay to work with WooCommerce plugin.

- 1. VISA
- 2. MASTERCARD
- 3. MAESTRO
- 4. AMERICAN EXPRESS
- 5. BANCONTACT
- 6. DINERS/DISCOVER

- 7. JCB
- 8. SEPA ELV
- 9. MYONE
- 10. UNIONPAY
- 11.PAYPAL
- 12.TWINT
- 13. PAYDIREKT
- 14.IDEAL
- 15.EPRZELEWY
- 16. POSTFINANCECARD
- **17. POSTFINANCE EFINANCE**
- 18. APPLEPAY
- 19. ALIPAY
- 20. CREDITCARD (SAFERPAY FIELDS)
- 21. KLARNA PAYMENTS
- 22.EPS
- 23. SOFORT
- 24. WL CRYPTO PAYMENTS

This plugin supports all the features of online payment methods like payment capturing, refunding & cancellation. All these payment operations are done in the WooCommerce backend & will be synced to Saferpay account also.

REQUIRMENTS

To install and configure Saferpay plugin in WordPress, the following is required:

- WordPress (6.0.2) and WooCommerce (6.8.2) plugin.
- License for Saferpay.

- A valid Saferpay account with at least one active Saferpay terminal through which payments can be carried out.
- API credentials like Terminal ID, Customer ID, JSON Username and JSON Password for the Saferpay Live- and/or Test environment.
- Valid acceptance agreement for payment methods.

INSTALLATION

To install Saferpay Plugin, follow the steps below.

Step 1: Download Saferpay plugin ZIP package.

Step 2: Go to WordPress admin dashboard and visit Plugins » Add New. After that, click on the 'Upload Plugin' button on top of the page.

Step 3: Then a plugin upload form will appear. Here you need to click on the 'Choose File' button and select the plugin file you downloaded earlier.

Step 4: After you have selected the file, you need to click on the 'Install Now' button.

WordPress will now upload the plugin file from your computer and install it for you. You will see a success message after the installation is finished.

Add Plugins Upload Plugin					
	If you have a plugin in	a .zip format, you may	install it by uploadi	ng it here.	
	Choose Fil	e No file chosen	Install Now		

Step 5: Once installed, you need to click on the Activate Plugin link to start using the plugin.

Manual installation via FTP

In rare cases, your WordPress hosting provider may have file restrictions that could prevent you to install a plugin from the admin area. In this situation, best way is to install the plugin manually using FTP.

First you will need to download the plugin's source as zip file. Next, you need to extract the zip file on your computer. Open the FTP client on your computer and connect to your

website using the login credentials provided by your web host. Once connected, you need to go to the /wp-content/plugins/ folder on your website, and then upload the extracted plugin folder to that path.

After uploading the files, you need to visit the WordPress admin area and click on the Plugins link in the admin menu. You'll see Saferpay plugin successfully installed on the plugins page. You need to click on the Activate link below the plugin to start using it.

After successfully installing the plugin, you can either enable test mode or live mode

Plugin update

To update the plugin, you have to follow up to step 4 from the Installation process described above.

SAFERPAY TEST ACCOUNT

Saferpay offers the possibility to test all interfaces especially for your created test account.

The Saferpay test account allows you to implement Saferpay into your system and make test transactions over several payment simulators before going live.

https://www.six-payment-services.com/en/site/e-commerce-developer/testaccount.html

Test mode configuration

We need to enter the provided test credentials into Saferpay settings:

$\textbf{Menu} \rightarrow \textbf{Settings} \rightarrow \textbf{Saferpay Settings}$

Initially, enable test mode and we need to enter the provided test credentials into Saferpay settings:

Required Data:

- Test-Customer ID
- Test-Terminal ID (eCommerce Terminal).
- Test JSON API username.
- Test JSON API password.

Live mode configuration

Switch to Saferpay Operation mode to live & we need to enter the provided live credentials into Saferpay settings:

The following data is required

- Live-Customer ID
- Live-Terminal ID
- Live JSON API username
- Live JSON API password

Note: If you are using WPML, you need to create "Saferpay Checkout" page in all supporting languages in order to make translation works properly. Refer screenshot below

Home > Saferpay Checkout

Configure general Saferpay settings from Menu \rightarrow Settings \rightarrow Saferpay Settings

The following configurations are available in Saferpay basic settings

- 1. **Enable Test Mode**: It defines the Saferpay Operation mode. If it is enabled, it allows the payment gateway to work in test mode by using test API keys otherwise it will work as live mode. By default, test mode is enabled.
- 2. Saferpay Licence: Choose the Saferpay licence you own. Saferpay has two licenses:
 - Saferpay eCommerce
 Access to: Payment Page Interface
 - Saferpay Business
 Access to: Payment Page Interface
 Transaction Interface

Saferpay Fields and more

In case you have Saferpay Business without the corresponding license, the API will throw an error.

3. Test API Base URL: These fields already have default values of API base URL.

E.g.: <u>https://test.saferpay.com/api</u>. **Note:** Recommended not to change it in ideal case. Changes applicable only if there is an update in base test url from Saferpay side.

- 4. **Test Customer ID**: Enter your test customer id given by Saferpay while creating a partner account in Saferpay.
- 5. **Test Terminal ID:** Enter your test terminal id given by the Saferpay.
- 6. Test JSON Username: Enter test JSON username given by the Saferpay
- Test JSON API Password: Enter test JSON API password given by Saferpay. To get JSON API username and password you have to login to Saferpay management interface and go to Settings -> JSON API basic authentication. Please refer https://www.sixpayment-services.com/en/site/e-commerce-developer/integration.htmland https://saferpay.github.io/sndbx/index.html#terms for more information.
- 8. **E-Mails:** Saferpay will send an email to the address specified in this field. You can add multiple emails separated by a comma. It is not a mandatory field. This is applicable only for PaymentPage interface.
- Check Extra Level of Authentication: Recommended for high-risk businesses (Jewelry, Electronics, etc.) to stick to the highest level of security. Else you can have it as "No, I don't want extra level of authentication."
- 10. Liability Shift Behavior: This field determines how to handle the transactions if a fraudulent card is used on the website. When we use this functionality, the liability shifts to the authorizing bank and the store owner receives no claim for any chargeback. It has two options:

- Option A:" If no liability shift has been granted transaction will be on-hold, merchant can capture or cancel transaction". Here order placed via fraudulent card will be on-hold and merchant can capture or cancel transaction accordingly.
- Option B: If no liability shift has been granted transactions will be auto cancelled. Here order placed via fraudulent card will be cancelled.
- 11. Payment Page CSS URL: Enter a valid CSS URL which is included in the payment page. This file must be hosted on an SSL/TLS secured web server (the URL must start with https://) Example: <u>https://merchanthost/merchant.css</u>. Refer https://saferpay.github.io/sndbx/CssiFrame.html for more details.
- 12. **Description of the order**: A human readable description provided by the merchant that will be displayed in Payment Page.
- 13. Payment Page Configuration Name: Here you can define the payment page configuration name. The configuration can be created from Safer pay Backoffice ('Settings > Payment Page Configuration'). If the configuration is not found by in Safer Pay (setting / Backoffice); the default configuration will be used.

Installer		This protects merchants from fraudulent online transactions. Based on analysis a froud prevention status is assigned to each transaction. Possible values: BLOCKED, APPROVED and MANUAL, BEVIEW. Note!! set to "YES", Please enable Fraud Intelligence module on your Saferpay account.

- 16. Allow save card in user profile: This allows merchant to enable/disable save card option in user profile. If it is enabled, allows your customer to save the credit card information in 'My account 'and to reuse the saved information for future payments. If it is disabled, it will hide the 'Saved Cards' menu as well from the 'My account'
- 17. Force access token generation: This allows merchant to enable/disable Access-token generation. If it is enabled, "Access-token" is generated automatically. Also, you need the Customerld and TerminalId to be configured for this to work. The generated token will overwrite the current token (if present), for the given environment configured. If it is not enabled, you need to create access-token manually from Saferpay backoffice. This is explained in pg.no. 26 under SAFERPAY (HOSTED) FIELDS SETTINGS (SAFERPAY CREDIT CARD).
- 18. Is User required to re-enter his CVC, when using a saved card: If we choose "Yes, Re-enter CVC "user will be prompted to enter CVC again during checkout while using saved card for their transaction.

If "No need to re-enter CVC" chosen user will not be prompted to enter CVC during checkout while using saved card for their transaction.

Screenshot: User prompted to enter CVC again during checkout when "Yes, Reenter CVC "option selected in Saferpay Settings

 My Account Add Card template: Here we can choose templates for adding card details in My Account Saved Cards section for users. Four sample templates are available.

Once you have configured Saferpay general settings, review all the settings carefully. If everything is fine, click Save Changes button.

20. Enable Fraud Prevention: This protects merchants from fraudulent online transactions. Based on analysis a fraud prevention status is assigned to each transaction. Possible values: BLOCKED, APPROVED and MANUAL_REVIEW. If set to "YES", Please enable Fraud Intelligence module on your Saferpay account.

Note: Please refer the following link for the initial setup of Fraud Intelligence business in the Saferpay Backoffice

https://docs.saferpay.com/home/features/fraud-intelligence#initial-setup-in-the-saferpaybackoffice

JSON API USERNAME AND PASSWORD GENERATION

To create JSON API username and password you have to login to Saferpay management interface and go to Settings -> JSON API basic authentication. Please refer https://www.six-payment-services.com/en/site/e-commerce-developer/integration.html for more information.

- 13. Authorization Method: Here you can set authorization method used for payment processing. Two options are available under these settings.
- a. Payment Page During the order processing the user will be redirected from the WooCommerce shop to the Saferpay payment gateway interface to process the payment. On successful completion of the payment the user will be redirected back to the WooCommerce shop. The Saferpay Payment Page Interface is intended for a simplified and universal integration of the payment process by using the PaymentPage form. The Saferpay PaymentPage can be used both with a Saferpay eCommerce license and with a Saferpay business license. All Saferpay supported payment methods can be processes with the Payment Page Interface.
- b. Transaction Interface (Widget Authorization) During the order processing the user is served with Saferpay payment forms in a pop up within the WooCommerce shop. The Transaction Interface is an extension to PaymentPage Interface. It offers the

Hosted Entry Form (HEF) to process card payments seamlessly. This interface can also be used in combination with Secure Card Data to store/tokenize payment data during the payment process. The Transaction Interface is only for holders of a business licence on the live system.

SAFERPAY (HOSTED) FIELDS SETTINGS (SAFERPAY CREDIT CARD)

Note: The SAFERPAY CREDIT CARD is only for holders of a business licence on the live system.

You need to configure the general settings before enabling the credit card, and Saferpay Fields Access Token will be displayed under the credit card section only if "Force access token generation" is enabled.

Other than general settings some additional settings need to be configured to use Saferpay credit card/Saferpay fields:

- 1. Saferpay Fields Access Token: Enter API Key generated from Saferpay back office.
- 2. Saferpay Fields API-URL

You can get 1 and 2 from Saferpay Backoffice. After login navigate to Settings > Saferpay Fields Access Tokens.

Note: From plugin version (2.2.0) Saferpay Field Access Token generated automatically after configuring Customerld and Terminalld (for the given environment) under Settings > Saferpay settings. You should enable the "Force access token generation" for this to work. This can also find under Settings > Saferpay settings.

JS-Library-URL: Here enter JS library URL.

Css URL(s): You can define here a CSS URL. The CSS can only be used, when it is hosted on a server which has SSL enabled. Refer https://saferpay.github.io/sndbx/CssiFrame.html#css-usecss for detailed information

Credit Card Theme: Here user can be able to choose four sample templates for credit card payment.

During the order processing the user is served with Saferpay payment forms in a pop up within the WooCommerce shop.

Is Save Card Available? Here admin can set **Active** or **Inactive** status. By enabling this, the customer can register cards and use it for future payments. Card details will be stored in Saferpay. Saved cards which are enabled in allowed payment methods for credit card settings are displayed during checkout.

SAFERPAY KLARNA PAYMENTS

Other than general settings, some additional settings need to be configured to use Klarna payment methods.

In Saferpay Back office under Settings > Terminals. Please select the terminal you want Klarna activated on and scroll down to Self Service. Please refer the link below

https://saferpay.github.io/sndbx/KlarnaPayments.html

This service handles differently, depending on the Saferpay environment (test/live) you are on, so please pay close attention.

You'll have two options Klarna and additionally, on the Saferpay test environment, Klarna Simulator. For Live mode configure Klarna. For test mode configure Klarna Simulator

Self service

WooCommerce Tax settings should be like this for Klarna.

Attention: We have some limitations with Klarna payments, in order to work Klarna payments properly, any of the values (product price, tax etc.) shouldn't have decimal points.

Note: For ALIPAY and TWINT there some issues with the test simulator, like order getting successful even if we terminate the payment process or by default order may get successful after some time.

SAFERPAY FEATURES

DESIGN CUSTOMIZATION

If you want to customize the default design of the Saferpay interface, Saferpay provides the following options:

- 1. CSS-Styling: The CSS styling options can be used over the following methods.
 - Payment page
 - Transaction Interface
 - Alias Insert

Note: The CSS file that is referenced by the CssUrl parameter must be stored on a web server that supports HTTPS.

Refer to <u>https://saferpay.github.io/sndbx/CssiFrame.html#css-usecss</u> for detailed information.

- 2. Theme: This parameter let you customize the appearance of the displayed payment pages. By default, a lightweight responsive styling will be enabled. If you don't want any styling, please choose 'NONE'.
- Payment Page Configuration: You can create different PP configurations to be applied over Transaction initialize and PaymentPage Initialize. The configuration itself can be created inside the Saferpay Backend under "Settings > Payment Page Configuration".

<u>Note:</u> If a custom CSS is provided, any design related settings set in the payment page configuration will be overwritten and the default design will be used.

ORDER MANAGEMENT

Orders done by customers are displayed under WooCommerce \rightarrow Orders. Here you can view the list of all orders available.

LIST OF ORDERS

Each order details can be viewed by clicking on Order. Here you can see order details Under each order, transaction details are displayed in transaction tab

TRANSACTION DETAILS

CAPTURE PAYMENT

In the payment configuration, if "Capturing" is set to "Auto Capture", the merchant doesn't need to do anything from the WordPress backend. Payments will be captured automatically by the system.

When the "Capturing" is set to "Manual Capture", the merchant will have the option to Capture or Cancel transactions. If we click Capture, the transaction will be captured.

For orders containing only digital products if payment is successful then the status of that order will be "Completed"

CANCEL PAYMENT

Only authorized, but not captured orders can be cancelled. Cancellation of order prevents any future change from being made to it. If we click CANCEL, the transaction will be cancelled.

TRANSACTION STATUS UNDER HISTORY TAB

REFUND PAYMENT

Just like Saferpay transactions, you can also manage the Saferpay refund transactions. Saferpay refund will only be available if transactions are captured properly. If transactions are not captured click 'Capture' button available in transaction tab, then only Saferpay refund button will be enabled. Manual refund buttons are available all the time. Admin should have to do manual refund and update details in Saferpay back office manually. Refund is also available for orders having completed status.

For Saferpay Refund do the steps mentioned below

- 1. Capture order from backend
- 2. Then click Refund button

ALIAS MANAGER

Alias Manager allows your customer to save the credit card information in his account and to use for the future payments.

Saferpay Secure Card Data or SCD in short, is a service for saving sensitive payment means information in the certified Saferpay data centre. By using SCD, the payment data is separated from the merchant application and no longer comes in contact with it. The stored Secure Card Data can be referred from future payments initiated via Transaction" interface.

This feature is available for payment methods that supports secure card data. Sensitive payment data is stored only in certified Saferpay data centre. If the settings '**Is Save Card**

Available?' is Active in Payment method configuration page, then logged in customers can save and use their card for future transactions.

Note: ADD CARD option will only be available for customers if "Allow save card in user profile" set to **Yes** in Saferpay general settings.

Card Number - Displays the masked credit card number provided by Saferpay.

Customers have the option to update the expiry date of the card that is already saved by clicking Edit button.

ERROR LOGS

Error Log section provides information about transactions performed by Saferpay that could not be completed successfully.

Error details provided by payment gateway will be logged and displayed in order details under 'Error Response Tab'.

RECURRING PAYMENT MODULE

COMPATIBILITY WITH WOOCOMMERCE SUBSCRIPTION PLUGIN

We have implemented Saferpay WooCommerce Gateway to be compatible with the WooCommerce Subscription (<u>https://woocommerce.com/products/woocommerce-subscriptions/</u>) plugin version **4.4.0**. After installing the Saferpay and WooCommerce Subscription plugin, you can filter the recurring supported payment methods from Saferpay general settings. Only the selected payment methods will be listed on the checkout page for subscription orders.

CONFIGURATIONS FOR RECURRING MODULE

ToolsSettings	Recurring payment settings	;
General	Recurring SCA challenge for	Yes 🗸
Writing	PSD2 Compliance	We highly recommend you to force SCA during an initial transaction, for Recurring Payments.
Reading		
Discussion	Recurring supported payment methods	MasterCard
Media	methous	American Express Diners Club
Permalinks		JCB
Privacy		MyOne SEPA ELV
Saferpay Settings		PostFinance Card
increase maximum Upload File Size	4	Twint Apple Pay
🖏 WP Mail SMTP		Credit Card 👻
💼 Wordfence 📀	Save Changes	

1. Recurring SCA challenge for PSD2 Compliance

Saferpay module is compatible with WooCommerce Subscription plugin. This field is applicable only for orders with subscription products. It ensures the PSD2 compliance of the recurring payments done through Saferpay while WooCommerce Subscription plugin is enabled.

2. Recurring supported payment methods.

If your customer adds any subscription to the cart, only gateway specific payment methods will be available at checkout. Make sure selected payment gateways are properly configured by going to WooCommerce > Settings > Payments.

Saferpay plugin is compatible with the following features of WooCommerce Subscription plugin,

- 1. Subscriptions
- 2. Manual renewal
- 3. Subscription Cancellation
- 4. Subscription Suspension

- 5. Subscription Reactivation
- 6. Subscription Amount Changes
- 7. Subscription Date Changes
- 8. Multiple Subscriptions (Multiple subscription products in same order)

The following Saferpay payment methods are supported for subscription orders.

- 1. VISA
- 2. MASTERCARD
- 3. AMERICAN EXPRESS
- 4. DINERS
- 5. JCB
- 6. MYONE
- 7. SEPA ELV
- 8. APPLEPAY
- 9. CREDIT CARD (SAFERPAY FIELDS)
- 10. TWINT Payment possible only if there is already saved card data available
- 11. POSTFINANCE CARD Payment possible only if there is already saved card data available

The renewal subscription orders are created through WooCommerce subscriptions cron. A new subscription order is placed when the scheduled time arrives. If the subscription payment fails, then the subscription gets on-hold and future renewal process not works until the subscription status changed to Active. Merchant can cancel the subscription if requires. During this time the customer is notified with an e-mail, for him/her to go through the process again that is, to reactivate subscription (via my-account) by paying the amount. The payment details are saved in the Saferpay and Wordpress backend provides list of child orders associated with each subscription.

WooCommerce	Search for a download	able product	Grant access		
Orders 11 98 ubscriptions	Related Orders				~~ *
ustomers	Order Number	Relationship	Date	Status	Total
oupons	#3836	Renewal Order	.1.day.ago	Processing	CHF21.40
eports ettings	<u>#3611</u>	Renewal Order	2.days.ago.	Processing	CHF21.40
tus	#3458	Renewal Order	2.days.ago.	Processing	CHF21.40
tensions poCommerce	<u>#3457</u>	Subscription	2.days.ago	Active	CHF21.40 / day
ultilingual Products	#3456	Parent Order	2.days.ago	Processing	CHF21.40

LIMITATIONS IDENTIFIED WITH THE RECURRING PAYMENT MODULE

1. Checkout with zero amount. (e.g. Free trial and zero signup fee) : The actual supported payment methods for this condition are Credit Cards, Twint and Postcard. But we ignored the methods Twint and Postcard because they can do recurring ONLY via Alias and Authorize Direct. While doing the zero payment normally, we are actually saving the card instead of the processing the payment, so it would be difficult to implement it for Twint and Postcard. So currently Credit Cards only supports the zero payment.

2. In Apple Pay 'pay by wallet' option, it is possible to checkout subscription product with some cards which does not support recurring payments. E.g. Maestro- even if checkout is possible actual subscription and related features may not work here as Maestro does not support recurring payments.

3. In Saferpay back-office normally when an auto renewal is triggered, it creates an order as a child of the first order. But the case is different for manual renewal, when a user does the manual renewal through checkout, that order will be created as a completely new order and there won't be a relation between previous orders under the same subscription. But in WordPress each auto and manual renewals will be placed under the initial parent order itself. 4. Saferpay WooCommerce Gateway does not support the following features of WooCommerce Subscription plugin.

- Subscription payment method change
- Subscription payment method change by customer
- Subscription payment method change by admin

The Saferpay API itself does not provide any support for payment method change, because they need to re-initiate the whole process to implement this. So we also have some limitations to do this.

STRING TRANSLATION USING WPML

If translations are not available after updating the plugin to latest version, you need to import the .po file again. .po files can be found inside the plugin folder under

"saferpay_woocommerce_gateway/languages/ Woocommerce-gateway-saferpay-de.po".
