

Module Version: 16.0.1.4

This module is used for making payments through wallee from point of sale.

For installing the module, we need to purchase the payment_wallee module also.

Configurations

- 1. Create Payment Providers (img 01)
 - Select provider as Wallee.
 - In the Credential tab, fill below columns: Rest API UserID, Rest API SpaceId, Application Key (Details from wallee account) Rest API TerminalId: The identifier (aka TID) of the terminal which should be used to process the transaction. It is a shorter number only visible within the portal.
- 2. Create PoS Payment Methods (img 02)
 - Select the value of Use a Payment Terminal as Wallee
 - Also select the corresponding Payment Provider.

img 02

Work Flow

1. Ensure the terminal is connected to the Internet. This might be different depending on the terminal hardware. Connect your till to initialize the processing of the payment

2. Pick the products in PoS interface and make the payment by selecting the Payment button (img 03).
