

# **Push Notification Extension**

#### **Product Specification**

Push Notification Extension is a Magento 2 extension developed by Pits Solutions to boost user engagement by integrating **Firebase Cloud Messaging**. This tool delivers quick and relevant updates, improving user experiences. Even during user inactivity, it keeps the communication alive with real-time updates. This is crucial for time-sensitive info, breaking news, or important events. In a world where attention is scarce, push notifications grab it, reviving user interest. The direct communication they offer significantly increases the chances of users coming back. Installing this extension in your online store is a breeze, promising to open new doors for refining your business strategies.

The Push Notification extension grants customers the authority to choose whether they wish to receive push notifications. This opt-in or opt-out decision is presented via a prompt box, enabling them to indicate their preference. After a customer place an order, the extension send customers updates about their orders directly to their devices.

On the administrative front, the extension equips administrators with a powerful toolset. This toolset enables them to dispatch tailored push notifications to the entire customer base. For instance, if there's a fresh discount offer, store owners can quickly send offer to all their customers. This functionality is seamlessly executed via a user-friendly form within the administrative section of the website. Such capabilities facilitate effective and streamlined communication, enabling the establishment to maintain a strong connection with customers while efficiently sharing significant updates or offers.

In summary, the Push Notification extension for Magento 2 gives customers control over push notifications and let store owners easily connect with their customer base. This tool boosts customer engagement and makes it simple to share information, leading to better relationships between businesses and their customers.

Push Notification extension is compatible with Windows (Chrome, Firefox, Opera), macOS (Safari -on macOS may limit silent push notifications to 3 per hour per origin. Excessive background notifications may be suppressed.), and Android devices. However, please note that our extension is not supported on iOS devices.

#### Features

- Can easily Enable / Disable the Push Notification extension.
- Supports multi-website, multi-store and multi-lingual.
- Can easily Enable / Disable push notification for each order update (order placing, invoice generation, shipment and credit memo).
- Admin can add custom message for each order update push notification.
- The Push Notification extension allows store owner to customize push notifications for when the website is in the frontend and use the default design when the website is in the background.
- Admin can customize the position of push notification in frontend.

### **1.** Fire Base cloud messaging

In our extension we used Firebase Cloud Messaging (FCM) for send push notification. FCM is a cloud-based service that delivers push notifications to Android, iOS, and web devices. FCM empowers developers to engage users in real time, providing personalized updates and information. With cross-platform support, user segmentation, and instant delivery, FCM enhances user experiences and retention. Its integration with Firebase amplifies its capabilities, ensuring efficient communication and effective user engagement.

For using Pits Push Notification extension in any website admin need to create a project in Fire base. Follow the steps given below to create a project in FCM.

• Go to the fire base website <a href="https://firebase.google.com/">https://firebase.google.com/</a> create an account and click "go to console" button.

• Open console, create new project.

🎍 Firebase console 🛛 🗙 🕂				~ - ¤ ×

	Firebase projects are containers for your apps Apps in a project share features like Real- time Database and Analytics			
				v

• After creating project create your app in web. Click on the icon in the page, which is marked in the image below.

Now you have created your web app for push notification.

• After creating web app open web app settings.

In web app setting open general tab and scroll down now you can see all required keys.

• Create Real time database for your project from the side bar. After creating real time database, it will show in the general tab.

After that you need to configure Firebase Cloud Messaging (FCM) using the **HTTP v1 API**.

Follow these steps:

#### • Enable Cloud Messaging API:

Under the **Cloud Messaging API (Legacy)** section, locate the **Cloud Messaging API (Legacy)** toggle. If needed, click to **enable it** (used only for backward compatibility – optional for HTTP v1). HTTP v1 uses **OAuth2 access tokens** for authorization and does not rely on the legacy server key.

	<						

• Create a Service Account for HTTP v1:

Go to **Project Settings > Service Accounts** tab. Click **Generate new private key** for the **Firebase Admin SDK**. This will download a .json file containing your **service account credentials**.

Now we have all the keys, now you only need to add this value into pits store configuration.

#### Push notification FCM configuration fields

Push notification FCM configuration fields

Here you need to fill up the fields with FCM configuration values. In Notification Position in frontend option you can select the position where push notification should appear in the frontend. If the website is running in the background then position will not change and the notification it will appear in the default position.

There are four options available in Notification Position in frontend (bottom left, bottom right, top left and top right) if we select top right position then push notification will appear in top right position.

Push notification in the top right position of the website.

If the site is running in the background then the custom positioning will not work and it will have the default position which is bottom-right.

Push notification appears in its default position and design as the website was running in the background.

### 2.2 Push Notification Permission pop-up

This section is for configuring the push notification permission pop up text and icon. Here we can see two fields: one for entering the permission pop-up message and the other for uploading image for the permission pop-up.

Push notification for new product config values

In this section, we can add configuration values for push notifications for new products. The notification image will be used only if the product image is missing, and the action URL for the product will be the product URL. After configuring the store settings, you need to check the box in the push notification section of the product edit/add form for the product you want to send a new product alert for, and then save the product. After saving the product with selected checkbox for "New product alert", the notification will be sent to all customers who have enabled push notifications. If you want to send the push notification again, you need to repeat the process. The new product alert is only applicable if the product is enabled and visible on the storefront.

Custom form to send push notification.

In the Push Notification configuration, there is an "Action Link for push notification" field where a URL can be provided. When the user clicks on the push notification, they will be redirected to the specified link, enabling deep linking to specific pages (e.g., product, promotion, or order detail pages).

Custom form to send push notification.

Custom push notification in frontend.

## 4.0 Push Notification in Mobile devices

In mobile device push notification design have changes in both frontend and background. Push Notification image is hidden in frontend. In background push notification appear in notification bar.

Background push notification in notification bar.

Frontend push notification in mobile device.

### **5.0 Installation Requirements**

- PHP 8.4
- Magento Open Source 2.4.8.
- Google Auth dependency via Composer is required for FCM (Firebase Cloud Messaging) functionality
- No other third-party plugins are required this extension is self-sustaining beyond Firebase support

## 5.1 Installation Steps

To install the Push Notification module, follow the steps below.

- Download the module.
- Access your web server directories and unzip and upload the content of the zip file to app/code/Pits/PushNotification directory.
- Install the required Firebase libraries using Composer: composer require google/auth:^1.18

Run the below commands on terminal

- php bin/magento setup:upgrade
- php bin/magento setup:di:compile
- php bin/magento setup:static-content:deploy -f
- php bin/magento cache:clean

### 6.0 Technical Requirements / Compatible with:

• Magento Open Source(CE) 2.4.8

### 6.1 Developer Notice

• After saving Firebase configuration values in the backend, please ensure that a firebase-messaging-sw.js file is created in both the pub and root directories.

- The site needs to be secured (SSL enabled) in order to receive push notifications.
- The Firebase Service Account JSON file is expected to be uploaded at: /app/etc/fcm\_config/default/.json

### **6.2 Supported Browsers**

- Windows: Chrome, Firefox and Opera
- Mac: Safari
- Android: Chrome, Firefox and Opera

## 6.3 Important Notes

- iOS devices will not support firebase push notification.
- Safari on macOS may limit silent push notifications to 3 per hour per origin. Excessive background notifications may be suppressed.

## 6.4 Supported Languages

- English
- German
- French

# 6.5 Change Log / Release Notes

Version: 1.0.1: June 2025

- Compatible with Magento Open Source (CE): 2.4.8
- New product alert added.
- Product stock alert added.
- Product price drop alert added.

Version: 1.0.0: Sept 2023

• Initial Version.

# 7.0 Support

If you have questions, use our contact form at <u>webshopextension.com</u> or email at <u>support@webshopextension.com</u>
